Phantom NiNja - May 18, 2026, 3:46 pm

If you like conspiracy theories you should watch this video:

[Video: <https://youtu.be/KFshtkJ4KDk?si=0d7XKwhljIQG5Vpr>]

what are your thoughts about this?

do you think that we timewarped in year 2009 ? That is why we have Mandela Effect?

Also do you think time is going by faster?

Do you believe that guy that founded chatgpt is trying to use AI to open portals?

I thought it's pretty interesting. Don't know if I believe 100% but I am open to it.

Thought to make this thread to just get a discussion going about conspiracy theories and all these aliens stuff the government been throwing thur our face.

I think we have made contact many years with aliens and the technology we have today we reversed engineered their tech. I personally don't think anyone is a genius. I find out most that are viewed as super smart over time you find they stole the work from someone else or got the idea from someone else but that person got the idea after someone did something.

I don't think anyone comes up with an original idea or technology. I think as humans we learn from each other and also it's human nature to steal other peoples ideas and pass it on as our own to make money. You see this throughout history and still see this happening today.

What are your thoughts about this? discuss below. ???

Not sure but recently everyone talks about time moving faster than it used to.

Yeah, but there's a lot of theories online about it. I just think it's interesting to think that maybe the universe is warping time itself and is why we feel this way or have that feeling that time changed.

I mean, honestly it really feels time move really fast. 10 days and it will be half year gone, and it

feels like nothing happened.

Yeah, I agree with that. I mean some medical experts thinks it's more mental.

I used to play a game called simcity and the funny thing about that game is that when you paused the time and it was paused for a long time.

Once you resume the game in the local paper you would see the local people claiming that time slowed down or if you speed it up then it would be like the citizens feel like time is ticking by faster than normal. It would call on scientist to figure it out. It was a joke in the game but even back then these jokes came from people actually thinking the government or scientists are tampering with the time with their experiments.

It would all make sense if we years later found out the governments been making black holes and somehow by accident they warp time itself. It would explained how we all feel like as we age the time is going by faster.

I agree with you because I feel that way all the time. Right now it's may 23th but I know in a blip it's going to be October. Where I am at we are finally just warming up so summer weather like is just starting. I always want to go outside and enjoy the weather but most of the time I don't because I get caught up with things doing stuff for my parents and applying for jobs and doing side work. Before I know it fall starts and I get sad that I didn't get to go outside. I do this every year. I know the same will happen this summer because it's out of my control.
