Thread: [How to Brute Force Passwords on Iphone](#)

m4n1Ac - August 23, 2010, 7:19 pm

This tutorial shows how to Brute Force Passwords on your Iphone

1.

Download these files <http://www.sendspace.com/file/b3to6f>

2.

Download WinSCP if you don't already have it from here:

<http://winscp.net/eng/download.php#download2>

3.

Fill in your iphones info into WinSCP and click login.

4.

Copy those files that you downloaded in step 1. to /usr/bin and you will need to have your own password list, so once you've acquired one copy the password list to /private/var/mobile/Documents

5.

So once you've done all of that you are ready to start cracking. Assuming you already have mobile terminal (if not download it from cydia)

type: login

The login as root, The default password is alpine. Then type chmod 777 /usr/bin/hydra. And then type hydra you should see this:

[img]http://img816.imageshack.us/img816/5910/img0003wt.jpg[/img]

Then type hydra -l admin -P /private/var/mobile/Documents/"nameofyourwordlist.txt" -v -V -t 1 "ip address of router e.g. 192.168.1.1" http-get /

Then you will see it trying various passwords until it gets the right one.

Note this will only work if the Username of the router is Admin.

I like the tut, but to use it you would already need to be on the network meaning you know the password.

You can brute force other things like website passwords, but you will have to type a longer command, the syntax guide is here: <http://ihackmyi.com/forum/index.php?topic=10549.0;wap2>

PRODIGY™ - August 24, 2010, 9:31 pm

Don't forget to mention, doing it this way will take much longer (time)

Well you're doing it from an ipod/iphone so that's expected. It's still a handy thing to know.

This is a dictionary attack.... not brute force.
