HTML Builder
File-to-HTML Converter & Payload Delivery Framework

What is it?

HTML Builder converts any binary file into a self-contained, fully encrypted HTML page styled as a legitimate document portal, software download, or security prompt. The entire decode/decrypt pipeline runs client-side — no plaintext ever touches the server.

Build Modes

Single — Embed one file for any OS. Fast and simple.

Multi-OS — Three separate payloads (Windows / macOS / Linux) in one page. OS is detected at runtime, correct file delivered automatically.

Remote — No embedded payload. Per-OS URLs are fetched at click time. Useful for large files or post-distribution payload swaps.

Templates (24)

Adobe PDF · Word · Excel · OneDrive · Teams · DocuSign · Google Drive · Dropbox · WeTransfer · Slack · Zoom · GitHub · Defender · Java · App · Image · Video · Captcha · Expired · Error · Invoice · DHL · Notion · Manual

All support custom title, description, and button text from the UI.

Output & Delivery

Format: HTML · HTM · SVG

Gmail compatible: HTML, HTM and SVG outputs can be attached and sent via Gmail.

Download: Native Save-As dialog (correct MIME) or silent auto-download

Display name: Custom file name + extension shown to user (e.g. Invoice_May2026.pdf)

ZIP wrap: Payload packaged inside a ZIP before delivery

Advanced Options

Password protection — DJB2 hash gate. Wrong password shows a locked page.

Expiry date — Page self-destructs after the set date.

Chained execution — Up to 3 extra files delivered sequentially after the main payload.

One-time download — Link deactivates after first use.

Sample Output

? Run (This link opens directly remotely)

<https://...../f84d7640-3902-4104-9ffb-a8a32a8e9aa8>

? Download (The HTML file containing the payload can be downloaded from this link and sent via Gmail)

<https://...../f84d7640-3902-4104-9ffb-a8a32a8e9aa8?dl=1>

Platform

User management with per-user quotas.

Full build history with UUID shareable links, view/download counters, and auto-expiry.

Live template preview.

Price

1 Month -----> 100\$

3 Months -----> 250\$

6 Months -----> 450\$

12 Months -----> 600\$

Every build is unique. No two outputs share a detectable pattern.
