Thread: [I am Looking For A RAT that I Can Remotely Access to Victim Android Screen Like every](#)

Hyder42501 - June 1, 2026, 3:29 pm

Hello I am Looking For A RAT with These Features

1. VNC

Real-time rendering of device screen with the ability to control it using clicks and gestures.
Full remote desktop experience.

2. AcVNC

Screen rendering based on Accessibility Nodes with remote control.
Bypasses Secure flag (black screen) protection in Android.

3. Keylogger

Based on Accessibility Nodes — records interactions with UI elements and captures device unlock password during login.

4. Target Detect

Identification of crypto and banking apps with the ability to launch them directly or request their removal when necessary.

5. Injects

Bank-oriented overlays requesting login/password when entering crypto or banking applications.
Multi-inject system for all targets.

6. Control Elements

Home, Back, Multitask, Recent apps, Power, Volume Up, Volume Down — full device control panel.

7. Blank Screen

Hides the user's screen by displaying a fake loading screen.
Perfect for covert operations without user awareness.

8. Update Screen

Hides the user's screen by displaying a fake Android system update screen.
Same as Blank Screen but disguised as OS update.

9. Notifications

Advanced settings for new connections, detection of interesting apps, successful password capture, and other critical events.

10. Auto Firewall

Automatic firewall rule creation for opening required ports in settings.
UAC privileges needed to apply.

11. Notes & Pinning

Add notes to clients and pin them in the list for quick access.
Organize your targets efficiently.

12. Client Ranking

Value-based ranking system — clients with more banking/crypto apps appear at top.
Secondary sort by known passwords.

13. Password Logging

Enhanced password logging during device unlock.
Improved capture accuracy and reliability.

14. Domain Support

Use domain name instead of raw IP address.
Better flexibility and easier server migration.

15. HTML Editor

Edit dropper's HTML design directly within the builder.
Full customization of installation pages.

16. Auto Install

Automated installation of essential builder dependencies including Java JDK and Python 3.

Well, you're never going to record screen presses on the lock screen. It's too isolated for any app to interact with it. Maybe Zeus, October, Trikkibot, or Broadwell will come close to this.

I mean, did you write this list yourself? If you want an Android RAT that can use Python, you'll have to bundle it with the RAT. And WTH are you asking about UAC and firewall rules on Android. Any Android device that has firewall settings will have default allow inbound for all apps. Not that you need to open any ports for a RAT.

Just pay a respected Dev \$50k for a custom RAT.

I don't get the point of that when BTMOB is MaaS.

Hyder42501 - June 2, 2026, 6:43 am

I Have Used BTMOB but it doesn't Have feature of Remote control etc like only i can see victims
Screen live instead of Controlling

It has HVNC features which will help you monitor and control.
