Thread: [Instantaneous acceleration from UAP in Syria](#)

Hackers - June 3, 2026, 2:36 pm

This sensor data / video was released in the recent tranche (#2, many more to come) by US Gov. It was uploaded to a classified intelligence network a few years ago, titled as a UAP in Syria demonstrating instantaneous acceleration.

I have seen instantaneous acceleration myself and know that it is possible for a perfectly still & stopped object to immediately come to fullspeed, faster than any known airplane/jet/missile, and come to a full stop without slowing down first.

I understand the video leaves some to be desired, but as someone who has witnessed an orb do this in realtime at low-ish altitude, I am keen to share information regarding this (1 of the 5 main observables).

The video also includes several segments at different speeds & contrasts to help isolate the object and see its movement.

Video:

<https://www.war.gov/ufo/#DOW-UAP-PR051-Syrian-UAP-instant-acceleration>

DramaKing - June 3, 2026, 3:41 pm

If an object accelerates beyond the tolerances of any known material, then it is likely energy.

Hackers - June 3, 2026, 3:42 pm

(Jun 3, 2026 03:41 PM)DramaKing Wrote: [\[CITE\]](#) If an object accelerates beyond the tolerances of any known material, then it is likely energy.

Yeah, definitely open to these all being plasma balls or other forms of energy, and not as physical. I think geomagnetic activity & other fields could certainly play a part in all of this too.

Thanks for saying that, I agree 100%. There is no known material that could withstand those speed changes / maneuvers.

Pr0m3th3us - June 3, 2026, 3:47 pm

"No known material" being the key words here. They keep plenty from us anyways, anyone who doesn't see that is just lying to themselves. I read something once that said the US gov keeps more from its own citizens than it does from its adversaries.

I wouldn't be surprised if they managed to reverse engineer those materials from crafts Bob Lazar

talked about long ago.

Hackers - June 3, 2026, 3:49 pm

Yeah, I'm okay with the idea of it not being "publicly known / acknowledged". If the gov has craft/materials or energy methods that can do this, then much of what we know about fossil fuels, propulsion, etc is way off and we deserve to know what we're capable of.

I don't buy into all the alien hype too much. Open to any reasoning. If it's the gov, then the gov should make the technology more readily available instead of hiding it. If the gov is observing another using the tech, the gov should make their observations more public.

They will never want alien tech to be used as a replacement for fossil fuels. It will never happen. That would put a major dent in their taxes they collect every year from the oil/gas companies. They gov never wants to cut taxes.

Not to mention it would put the entire world into a major tailspin. Other gov's would lose it, everyday citizens would lose it, it would be instant panic mode. Look what happened when someone mentioned the "human malware" and the media took off running with that. The world was thrown into a major panic over the flu.....

DramaKing - June 3, 2026, 4:03 pm

If the recordings were of gov experiments, there's no way that they would be declassified.

Hackers - June 3, 2026, 4:05 pm

Well, it doesn't have to be "alien" tech. I agree though that fossil fuel / control systems need to stay in place, according to some.

Ultimately this is the driving factor for all the infighting we're seeing & will continue to see. That, and fear of starting a panic, or people being upset.

Lets say the most plausible explanation is true... that the US Gov made all of these. Okay, then they're going to need to explain why we're fighting over shipping routes, gas & oil, and other outdated tech instead of focusing on new tech. Even with national security claims, that only goes so far.

I think no matter what, there are some that are scared to acknowledge the truth, and some do not care.

June 9th - Capitol Hill... A few in Congress and some others are said to be making statements, and there has been some materials distributed already to reporters, in case disclosure comes to a halt. Long story short, we've got a ways to go for full disclosure, but there are good men & women who are willing to risk their careers to get info out.

There's also chatter on the hill about possibly giving 30-60 day immunity windows to legacy program whistleblowers to come forward. That would be extremely exciting.

Not proven, but the current rumor is that we're getting another batch on war.gov by June 12, but we'll see. June 9th public chats on the steps seems more concrete, not sure about the more official release of batch3 yet.

(Jun 3, 2026 04:03 PM)DramaKing Wrote: [\[CITE\]](#) If the recordings were of gov experiments, there's no way that they would be declassified.

Yes & no.

Look up Atomic Energy Act.

Congress & President are the ones demanding disclosure... AEA is above them, for DOE & DOD classification levels.

There's a very real dynamic where part of our gov is not privy to the highest classification levels, and we've already seen Congress members specifically say that they are hitting a wall with certain people & info.

What i guess I'm saying is that there are two aspects of US Gov for classifying this, and they're NOT on the same page at all. The 30-60 day immunity windows to whistleblowers for example would be specifically so they could feel comfortable breaking the AEA laws & classifications, to comply with the below-AEA executive order from Trump & Congress' directives.

You have way to much faith in out Gov man....insane. If you think they will ever give a reasonable explanation why they are fighting over oil/gas. shipping routes etc, (let alone anything at all that they do) you are brainwashed.

Hackers - June 4, 2026, 3:01 am

Of course not, many won't, but there are others that will. We have Congress members that actually made statements just a few weeks ago about how the gov budgets for UAP may be more related to energy & propulsion tech in black budget programs.

It's a hot topic, is causing some infighting, and we're going to continue to see that as members of Congress & the White House attempt to declassify material that has historically been classified by AEA laws for DOE, in conjunction with private industry like Lockheed Martin & others in DOE or DOD contracts.

Very little faith in our Gov, but it was always going to have to be like this - Trickle disclosure, disagreements in our gov over it, and hopefully enough momentum to keep going even as some try to stop it.

There are other countries involved too though, so it's not just up to the USA. For example, RU, China, and Mexico have programs. France just scheduled their first official UAP hearing in the courts. Ukraine started a UAP observation group for the war, because sightings could be of Russian technology (unknown doesn't mean aliens).

There are a handful of countries that have been tracking all of this for many years, and we can expect to see more and more as other countries besides the USA begin to disclose what they have

been doing too.

There are so many angles, but at the end of the day, many billions of dollars have been spent on these programs without transparency or public oversight in the US & other countries. It's time for that to be disclosed so we can have our own opinions of whether the money was well-spent, wasted, or whatever.

Nothing will change, its all just smoke and mirrors, lies and more gaslighting and they have people like you right where they want you. Your wrapped around their finger and you don't even know it. Thinking other countries are giving a fuck, tracking this and that, spending money (this is the biggest one they get you with). They want people like you to post, make tik toks, youtube, whatever the platform is they don't care. As long as you push the propaganda they want you to. Even if its disinformation...If your crap convinces even just 10% of your viewers...they won. That 10% will go on to convince another 20% and so on.....your all smoked.

To anyone who thinks they can just "vote" their way out of this, i laugh out loud all day at you. No i ROFL. Nothing will change. 99% of every member in congress is bought and paid for, your vote means nothing. Looked what happened to one of the only members who didn't take Israel's money....hes gone. Wake up people, every level of gov is ALWAYS lying nowadays and the sooner you realize this the sooner you will wake the fuck up and see they are leading people down a rabbit hole on purpose, keep you distracted...then next week its something else. And your hooked. remind you of something? shorts? insta videos? tik tocks? Its extremely effective to the weak minded,.

I witnessed things in person on a few occasions in 2024-2025, please hold back from acting like anyone has manipulated me. I was publicly posting about all of this in October 2024 before any of this really picked up in the news, before New Jersey, etc.

I do not think having a negative mindset like you is a good thing, at all. You are the one that's hooked into a defeatist attitude like nothing will change, and that's what must be removed from society. The apathy, the complacency is intoxicating for some, and maybe for you too, but I will have absolutely no part of it.

You're the one that's manipulated. Go look at how many bots talk like you on reddit or elsewhere. It's disgusting. The whole "nothing will change" attitude is disturbing and inaccurate. Things change all the time for people who pivot and participate.

To put it bluntly, you sound like a sad and unsuccessful incel. I feel comfortable telling you to take your attitude elsewhere because you are crossing the line and saying you will laugh at me.

You are the one that's weak, not me. I expect change and demand it. You lie on your back and ridicule people who expect more of the world, and ask more of the world, and do more in the world.

I refuse to be anything like you, it is sad and cringe as fuck to be completely honest.

Rofl ? typical zoomer and gen z attitude. "Don't say things that hurt my feelings" ROFL life sucks bro deal with it. If you can't maybe YOU should be removed.

Yea I remember you were going crazy about stuff in the sky.

lol Reddit. I wouldn't t use that shit to save my life. What a shitshow. Yea you cooked bud.

Aww you put me on your ignore list, boo hoo. Another kid who can't stand to be told the truth lol

Astaroth - June 4, 2026, 6:26 am

I don't have much to say right now on the subject. But isn't it incredibly strange how many different shapes the various UAPs seem to have? Shaped like spheres, triangles, frisbees, even flying horses like in the video presented by Haime Maussan.

Also a bit strange that EVERY video is fuzzy. (I am aware those military cameras are equipped for detecting threats and not optimized for chrystal clear closeups, but given the awareness of UAPs now, shouldn't there be at least ONE clear shot? I think it should.)

I do appreciate your posts on the subject. Make no mistake. ?

Hackers - June 4, 2026, 6:35 am

Definitely agree, it is very odd. I haven't seen the horse / Haime video, but can check it out later today.

I think there's a certain degree of accuracy within the fuzziness in terms of why... There are 2 leading theories - 1 is more fringe than the other, but both are pretty valid given the circumstances. One thing to consider is that these are objects or forms of energy that can move faster than the speed of sound, without making a noise, and much faster too.

It's not crazy to consider that anything that can move that fast is using a form of propulsion that protects itself from the g-forces and friction in the air or other mediums. For example, our strongest metals would truly be ripped apart by these forces. Even maintaining a chemical or energy reaction would be very tough at those speeds... It definitely leads to theories of field generation, or other methods to interact with the surroundings in a way that protects it. Of course, this isn't proven, but field generation and repelling the effects of gravity is theorized and mathematically possible with enough energy (that we don't publicly have access to, if at all).

So, with all this said, what I mean is that the fuzziness very well may be an attribute of its own propulsion system rather than a problem with the recordings.

That's the fringe theory above, which others have stated. The less fringe theory is much more obvious - these are reflecting or emitting light, and trying to take a good photo of something with a bright light source is extremely difficult.

I don't think it's necessarily a problem that people have blurry videos when they are standing, holding a camera without a tripod, and recording a moving object high in the sky. I know that this is a huge problem for people wanting crystal clear videos, but there are lots of reasons they don't exist which don't invalidate the sightings themselves.

For military tech, you have to realize that a lot of videos are being taken from normal surveillance drones which are there to monitor subs & boats in the oceans, not to track small UAP / objects zipping across the ocean's surface.

This is why IR and non-visual data recordings are so important. It's far easier to track a heat signature than it is to get a crystal clear, focused video of something small-ish and moving at those speeds.

If we look at the FLIR video or the others that were leaked and then declassified around 2017, then we can see why pretty clearly. Even the jets that scrambled had a hard time locking on, and they audibly celebrate once they do.

It's not realistic to expect normal citizens to have crystal clear videos of these. These objects come in different sizes & shapes like you say, but it's a very hard thing to genuinely focus these when they emit or reflect light, move extremely fast, etc.

the important takeaway is that we don't have jets or aircraft (publicly at least) that move like this. I think that a lot of "debunkers" are completely missing the point... The fact that these are extremely hard to record isn't evidence that there's nothing there, it's evidence that these objects are unlike others we can record.

Astaroth - June 4, 2026, 6:55 am

I fully agree with your points, especially the one related to material and propulsion. That the "object" might not even have a clear shape at all even when seen up close due to it's "state" in lack of a better word. (I couldn't find the right English words to convey what I really wanted to say, but I can say we're on the same page.) Thank You. ?

No problem on the quoting thing

Yeah, it's really hard to know 100% without more and more evidence, but hopefully we'll get more. I try to stick to the less fringe theory personally, but I love the idea of the other theories...

At end of the day, if someone goes and tries to film a star with their phone, they're going to wobble around, make it blurry, and just see a light source.

So when an object in the sky is hovering brightly, it has the same problem...

And then the object is actually moving... the problem is worst.

So to me, it's not a big surprise that most videos of these are blurry. I recorded 100s of videos and maybe 10-15 of them are "good"? I have 3 "great" videos that on their own are inconclusive. Visual camera recordings are not a reliable way for a normal citizen to record these well. But even military cams and devices can struggle... Just the nature of something moving fast & emitting light.

That's why infrared & other tech is so so so so important for this. Another problem though is that it's documented that many don't have a heat signature, no exhaust, etc, and so it can be tricky even with advanced systems to find them, let alone track them accurately in detail.

Obviously some footage is more clear than others. But I would challenge anyone who is upset by blurry videos to go film a star from their phone while they're walking or even just standing, and then see the results. It certainly won't look like the star they saw in the sky, for the most part, and it will likely have less details, lens flare, etc.

> But I wouldn't fight them and say that they are lying about recording a star. I would just acknowledge that even a modern phone struggles to capture a star in detail due to the light & other aspects (wobbly hands, far distance, etc).
