Thread: [Claude Bridge](#)

JebTheManiac - June 11, 2026, 9:16 pm

I'm not new to HF just lost my account years ago. Hello everyone.

I've been working a on bridge extension for FireFox that basically gives you a hot key to run what ever cmd, PowerShell, node, etc on your machine.

It also semi auto rotates Google accounts, the only user involvement is to press the continue with Google button on the login page. The extension will choose freshest account and login.It will then paste a handoff doc to the fresh account's new agent to keep going with your current project.

It's not great, but functions so far as intended. Been using it nonstop for the past week and none of my accounts had issues so far.

It's a work I progress and I'm adhd af so, be ready haha

If you want it, shoot me an inbox and we'll figure out a way to get you the files. (remind me to take out my accounts before I send it out please hahah I nearly made the mistake once already).

I know this place and its community, I don't expect this post to be seen as safe. And you shouldn't really, but hey if you want we can chat and shit I can run live screen share demo and such.

I don't know how often I'll check back here so if yall wanna reach me for sure, use this email (my public email, not personal) nonyablyat@gmail.com.

Before anyone thinks they're smart by saying this is basically Claude code, no.b it's way dumber but free and not that slow in the end ?

Before anyone thinks they're smart by saying this is basically Claude code, no: it's way dumber but free and not that slow in the end ?
