[WLGGen](#) ? loading encrypted image...

What is this?

[WLGGen](#) is a lightweight web-based tool designed to quickly generate wordlists directly in your browser.

It provides a simple, fast interface for creating custom lists without needing any installations, scripts, or external dependencies.

Everything runs client-side, keeping it fast, private, and easy to use.

Features

[+] High-volume wordlist generation (up to 1M lines supported)

[+] Fast in-browser wordlist generation

[+] Clean and minimal interface

[+] No installs or dependencies required

[+] Fully client-side processing

[+] Instant output generation

[+] Copy results with one click

[+] Mobile & desktop friendly

[+] Works entirely client side

[+] More features coming soon

[? loading encrypted image...](#)

How to use

[+] Open [WLGGen](#) in your browser

[+] Configure your wordlist settings

[+] Generate your output

[+] Review the results

[+] Copy or download your wordlist

Link

[Open WLGen](#)

The tool is still actively being improved, so there may be bugs or features that need refining. Suggestions, bug reports, and feedback are always appreciated and will help shape future updates. Hope some of you find it useful.

Gave it a whirl and it guessed my Mrs password in the first list it generated ?

Hopefully, that's enough to convince her to listen to my advice and change it to a stronger version!

Pr0m3th3us - June 12, 2026, 8:02 pm

Awesome tool holy smoke. Thanks man.
