Thread: [The Best RAT Ever Created! \[Inspired by LuminosityLink\]](#)

Noah King - June 22, 2026, 6:32 am

I believe I have created the best public RAT known to mankind. That is; if I share it here... of course! Let me know your thoughts, and if I should make it public or sell it! I would rather sell it to limited people, and give them any updates I add.

It's main payload is Python, hence why I named it "pyAdmin"

<https://prnt.sc/Jb5sZIG1T12f>

<https://prnt.sc/uimUxzt1bz8c>

What's good about this RAT:

Working hidden desktop (pure python)

Keylogger + Screenshotter that gets a screenshot on click DOWN (right away) -- great for capturing you know what.

Backup C2 connection, direct IP/Port, and pastebin/fetch from URL.

Reverse Proxy (it's added but it's missing from the menu right now for some reason -.-)

Still need to add a clipper tab and advanced clipper for multiple/all types of addresses.

It's python, but WAIT! -- I use a FUD .vbs loader that installs python completely silently, and then executes the .pyw files, that auto-install the required packages.

I'm yet to get traffic to test spreading. But someone correct me... with AES, isn't this FUD? I'm sure python scripts don't get detected?

So... what can I add to this to make it even better? I should really focus on trying to spread... I have a Win+R Cloudflare setup that should bypass WD. I just find it hard to actually get traffic, I guess. Spreading to developers in third world/poor countries is all I've ever done, really... I did get 40 BTC from a US guy once... but that was 10+ years back, and I sold them very cheap.

I'm poor, but have good stuff. Anyone want to team up? We could make money real fast together!
