MASTERCARDER DISCUSSION THREAD #1

I've always enjoyed reading everyone's opinions on random topics, so I figured I'd start a discussion series for the community.

A couple of times each week, I'll throw up a question or scenario and see where the discussion goes. No right or wrong answers, just different perspectives and interesting conversations. Feel free to respond back with real genuine answers, no judgement!

PREVIOUS DISCUSSION: [You get \\$1,000,000 today, but you can never use the internet again. Do you accept?](#)

????????????????????

You get one opportunity.

You can learn the 100% absolute truth about any mystery in existence. No lies, no theories, no missing pieces—just the complete answer.

Some examples:

- Are we alone in the universe?
- What happens after death?
- How did life begin?
- Is there a higher intelligence behind reality?
- What really happened during an unsolved historical event?
- Are there things about our world that we're simply not meant to know?

You only get one question, and once it's answered, you can never ask another.

? WHAT MYSTERY WOULD YOU CHOOSE TO KNOW THE ABSOLUTE TRUTH ABOUT? ?

loadman - June 22, 2026, 12:04 pm

- Are there things about our world that we're simply not meant to know?

so if u happen to travel at the speed of light to another galaxy and even if u find life there or extraterrestrial information, if u come back to earth everyone will be dead due to time working differently

We still don't know what dark matter and dark energy are, what happens inside black holes, or the Double-Slit Experiment in quantum mechanics

When not observed, they behave like waves and create an interference pattern.

When observed or measured, they behave like particles and travel through one slit, changing the result.

There may be certain information that we are simply not meant to know, and even if someone were to discover such forbidden knowledge, the way everything is designed might make it impossible or forbidden to share it with others.

the very nature of the universe might prevent them from sharing it, as if some mysteries are destined to remain beyond human understanding.

Great response. That's what makes it fascinating to me. We might spend thousands of years advancing and still never understand things like dark matter, consciousness, or why observation seems to affect quantum systems. Maybe some mysteries are simply beyond human comprehension.

I agree also with the last part.. there is a lot of real knowledge hidden from the masses, has been for a very long time.

What happens after death?

I once came back from death after an accident. During the time when I was clinically dead, all my memories started playing back like a movie, beginning from my childhood. After that, the memories slowly started to fade away and disappear. Then, I felt as if I had become an electron or a neutron a tiny particle . There was only darkness, but I could still feel it. weirdly, it wasn't boring at all. It felt calm, peaceful, and soothing. It's hard to explain exactly what it was like, but shortly afterward, I was brought back to life.

xadamxk - June 22, 2026, 12:56 pm

No. My job requires the internet and I'd surpass that long before I'd retire.

Raijin - June 22, 2026, 2:32 pm

I would like to know if we are alone in the universe or not.

That's something I would love to know too.
