Thread: [Find IOT 0days VS Kwon CVE](#)

UNST0P4B1E - June 26, 2026, 1:18 pm

I'm trying to make my own botnet, but I don't know if I should try to extract firmware and reverse engineer it to find a zero-day, or if it's better to just use a CVE, even though it's could be patched.

MadScientist - June 26, 2026, 1:21 pm

Of course its better to reverse engineer IoT devices firmware and find a 0day over using a publicly know exploit that's going to get patched.

UNST0P4B1E - June 26, 2026, 1:33 pm

Yea but the 0 days would mainly work on the same build tha you reverse so idk if it worth the time and does brute force SSH or the main login page also a good option ??

cl0udzz - June 26, 2026, 11:15 pm

Lots of IOT devices such as cameras use very similar components so a 0day could be used on more than one brand of IOT devices, also from what I've heard the "meta" right now in botnets are TVs with ADB open.

UNST0P4B1E - June 28, 2026, 11:55 am

Ok ok but should I check my target on shodan or not nesseraly, because when im trying to find IP TVs i find like 150 000 for like 1 700 000 for IP Camera, I dont really kwon what target to get working ?

smofeng - June 30, 2026, 8:10 pm

Hello, I can sell you Exploit or we can make botnets with you)

UNST0P4B1E - July 1, 2026, 9:00 am

Im not gonna say no for some help but Im trying to find my owne 0 days on those IP ANDROID TV BOX tha you can find on amazone

cl0udzz - July 16, 2026, 1:37 am

Funny how everyone is treating finding 0days like a weekend project and not something that takes lots of research and trial and error...

UNST0P4B1E - July 24, 2026, 1:03 pm

I kwon it really hard and require a lot of determination, but went reverse it your passion im not counting the time and even if I dont find a 0 days im still learning in the end of the days

d3st0 - July 28, 2026, 8:14 pm

From what I've seen with IoT devices like sec cams, there is a lot of developer backdoors that get left in after development + weak default creds or hard coded backup passwords which are probably your best bet when reversing IoT firmware. Mind you I only am really thinking about one company in specific but from everything ive seen its pretty standard to find those elsewhere.

UNSTOP4B1E - July 30, 2026, 9:13 am

Yea I kwon, but im still not sure about IP Cam or Androit TV Box, i kwon for cam I try Hikvision but for Android TV box idk what product to target maybe Amazon FireStick

closedeyeknight - July 31, 2026, 8:54 pm

Find a zero-day exploit is a long term job, If u are only want to spread, it doesn't worth, just use public CVE and brute force.

I want to spread the botnet too, I'm planing to buy a commercial botnet now or modify based on mirai. Maybe you can DM me and we do together.

To me, u are not interested in spreading botnet but do exploit dev.

UNSTOP4B1E - August 1, 2026, 8:13 am

Yea sure, we can work togethe no probleme

zuviqn23 - August 14, 2026, 2:43 pm

sorry but what does kwon mean?

babayaga3331 - September 1, 2026, 3:29 am

im trying to build one myself, cant pm you cuz new acc

lmk if u wanna try smthing together
