Thread: [Help with cracking SHA1 hashes](#)

rtkol321 - June 26, 2026, 4:39 pm

Hello everyone,

I have a couple of sha1 hashes, which I don't know the plaintexts for. Can you help me with decrypting them? I know some of you guys know efficient ways for bruteforcing hashes.

These are not password hashes. Their structure is a couple of English words concatenated together, each word starting with uppercase letter and the rest of the word is lowercase with optional couple digits at the end.

Example:

AppleTreeCity -> a5c3cb52a3ea5a12558315c0537150641e57fa36

BlueKeyboard2 -> 67151b5e494278a0cb226779dafcd5210868f5a0

Here are the actual hashes:

d5102afe822bcd443e7262e9df0d60f73458465d
00d33e6199fb08fb057cbcf141293c613b63421e
b9112fe02f87b8865c132722b70f8ba9f9cd1779
6ebdd23208b7ef9aa8839bb36c6acad822c8918f
24cd074769ebcbb9a24058db4ca87d6dfb7fd2eb
b2428493a31706fa404b64bacaef72596da709ba
a10ab9ce22c390adcc80e3295848512067895519
3731cb8ee42354108e8539e7dc08aa270f94e95b

If someone could help me, thanks in advance

Is there at least a starting wordlists like is it a combination of 10k words that are combined between them, also what's the origin, that can also help...

DramaKing - June 27, 2026, 8:06 am

Yeah, that's a keyspace of up to 65 quadrillion, so bad luck.
