Thread: [Doing Steroids Cycle Right Now](#)

Edmond Dantes - June 28, 2026, 10:39 am

Currently on my day 20 of my cycle.

It insists of Testosterone enanthate and Primebolan.

Doing 1 test every 5 days and Primebolan I inject daily. Will let you know how it goes.

Omniscient - June 28, 2026, 10:41 am

Why?

What's your purpose in doing this?

Edmond Dantes - June 28, 2026, 10:42 am

(Jun 28, 2026 10:41 AM)Omniscient Wrote: [\[CITE\]](#) Why?

What's your purpose in doing this?

Being in better shape for the Summer.

Also being on steroids will help me stay out of drugs and alcohol

Weird choice to use drugs to stay away from drugs.

I advise you really be careful doing steroids, make sure to do serious research.

My only regret is not visiting the doctor in advance to check my body properly but its too late now.

Driz - June 28, 2026, 11:00 am

First cycle and running Test and Primo?

Why?

Test at 300mg p/w is plenty for a first cycle. No need for primo.

Also no need to pin Primo everyday.

What ml/mg dosages are you running? I'm assuming that 1ml Test E per week at 300mg? and Primo is what..? 100mg/ml everyday?

Omniscient - June 28, 2026, 11:03 am

(Jun 28, 2026 11:00 AM)Driz Wrote: [\[CITE\]](#) First cycle and running Test and Primo? Why?

I'm training to be a comp bodybuilder. Being trained by a pro coach and train with pros for about 3 years now.

Plus coaching and PED certifications.

(Jun 28, 2026 11:05 AM)Edmond Dantes Wrote: [\[CITE\]](#) Primo is 100mg/day

So....500 P and 250 Test a week. You'll potentially crash your E2 running it that high esp when you're running Test that low. Don't see the point of pushing almost 1.1g of anabolics a week. If your goal is E2 management, you can do it with EQ at a much lower dose. Also make sure your Primo is legit lol.

Do your anabolic load math in weeks. Pinning E once a week means your hormones will be in peaks and troughs. If I were you I'd rather do 300 P 450 T

3x shots M W F. Feel better and won't roller coaster your hormones through the week. Food for thought.

I agree they shouldn't need them, but that being said the science does seem to suggest there's

been an unexplained decline in male testosterone across generations since the 80s.

"...the research suggests an average decline of roughly 1% per year since the late 1980s"

Reference:

<https://www.spitalclinic.com/articles/testosterone-levels-declining-generational-comparison>

I'm not suggesting PEDs are the answer here, but it's always surprised me how the implications of this are not something we're all paying very close attention to, especially with how symbolically castrated and passive young men within modern society have become.

True, I will not lie you that I feel my testosterone levels are lower than some of my friends who are older than me.

Omniscient - June 28, 2026, 11:41 am

(Jun 28, 2026 11:30 AM)Edmond Dantes Wrote: [\[CITE\]](#) True, I will not lie you that I feel my testosterone levels are lower than some of my friends who are older than me.

But did you get tested for Low-T?

I did and mine was extremely low, so I'm on T now with a weekly shot. But I'm old (almost 56). I know I had super T when I was younger.

I advise you test your numbers before you go start toying with them.

Edmond Dantes - June 28, 2026, 12:02 pm

I hope you tried out some less damaging stuff first, like Vitamin D or checking mineral content. Or your diet in general for that matter before going into anabolics.

If you do need anabolics, sure. But please check out the essentials first lol.

Edmond Dantes - June 28, 2026, 12:19 pm

just know that the MOST COSTLIEST thing in this world is free and cannot be bought with any amount of \$\$\$\$\$\$ which is your HEALTH and YOUR LOVED ONES.. no money can buy that

do not spoil your health with these steroids, dont try to take a shortcut.

1 year of gym and good diet will give u good results aswell

Edmond Dantes - July 1, 2026, 11:01 am

yeah you are right brother, but I already got into them.

7 - July 2, 2026, 12:38 am

Good for you mate... bit late to be starting now for the summer bod though. Ignore the stiff's who haven't left their mothers basement and those mentioning taking taking tests as if your doing it for hormone replacement therapy. But are you trying to bulk, cut or what is your aim? Also what is your current weight/height and age. Also ignore BMI its a load of crap, look at body fat/mass percentages and in-body scoring.

A few things to note though, increase you water flush the toxins out and do it constantly. Check your blood pressure and do blood draining after a while, I also notice your not mentioning any estrogen blockers. You'll regret that if you don't start once them glands start forming that's it, hospital ripped out is the best way. Also be careful with the esters one thing you'll notice more with Test-E over Test-P is the amount of oil spots you will get.

Are you budgeting? with these what gauge pins you doing? Test-E is quite thick. Personally I dont go back to E & C anymore only P. If your not budgeting HGH i strongly recommend over any testosterone but combined can achieve great results but the true results wont happen in a few weeks even if you paying 2k\$ a month in peptites and adding more to the stack.

Alot of people can't handle Tren but Tren (if you can handle the mental) and Mesterolone is a good combination with PT-141 and MOTS-C with HGH, Test-P and Nads. Don't bother with Winstrol your dick will regret that and it takes months before its back but other than that ignore the others that tells you it make it shrink infact its mostly your balls that will get tighter and PT-141 and Mesterolone actually increases libido.

Also simple thing, coconut water.. natural electrolytes great for rehydration and monitor your urine pigmentation.

(Jul 1, 2026 06:39 AM)Mastercarder Wrote: [\[CITE\]](#) All the best bro. Nothing better than looking ripped and good.

I was on Dianabol for a bit. Pumped me up. Never did it again tho.

Good choice to stop not very effective and if in tablet form quite toxic.

(Jul 1, 2026 10:49 AM)loadman Wrote: [\[CITE\]](#) just know that the MOST COSTLIEST thing in this world is free and cannot be bought with any amount of \$\$\$\$\$\$ which is your HEALTH and YOUR LOVED ONES.. no money can buy that

Thanks im happy you feel that way about your loved ones, touched. No Loadman is right in some ways 1 year at the gym without any steroids and you will get good results but not the same results you will get from biohacking also am unsure about not taking shortcuts if your willing to understands the shortcuts your taking. But [loadman](#) did tell me the coolest thing in this world is buying products from them :D

But how foolish of me to not suggest proper hormone diagnosis, tests and being natural.

Ignore of the information that is above this is based on my own experience and maybe people should listen to those without any, more.

Infact, I think there are some Vegans here that might even suggest a few things. Because we all know they look a super healthy bunch :D

Hey bro I'm 28 years old 197 cm and 119 KG. Goal is to cut fat and gain muscle mass. The cycle was done for me by a friend who is really experienced and also takes the same stuff.

The products are quality ones bought from pharmacies, not from shady people that mix them in their basements. I appreciate the knowledge you shared with me. I drink a lot of water 6-7L a day. Will try coconut water too.

7 - July 2, 2026, 1:15 am

Clen, HGH and switch to test-P. My advise

Also MOTS-C in the morning and shilajit and natural saffron 15mins before bed with warm water.

Correct bro. It was all water weight anyways. I turned into hulk in 2 weeks hahaha.

7 - July 2, 2026, 1:54 am

What I would suggest is losing the fat first though.

Stop drinking alcohol seriously it makes a huge difference cut carbs if you can with your diet. Monitor your heart heavily aim to train between 115-130 to burn fat. Test-P is better for cutting than Test-E although the rise of Test-E is better but the spots especially with primobolan I would get some really good dermatology skin care and be thorough. Especially face, back of the neck and back in general.

I was 110kg a few months back I tried to lose weight too fast but i was losing muscle mass but now I have tuned it better and currently at 94kg with 6% BF and 102/100 in-body score which is extremely good. Also watch your blood levels in terms of hemoglobin I mean. This can be a

possitive thing for healing and for PRT but risks of clotting and heart issues. Look after your heart and liver but also your brain.

Try to imagine your whole body needing balance and if you stimulate only the body and not the brain you will build up anxiety and vice versa

Its faster acting better for cutting. Less oil and mixes well with Tren A if you can handle the temper but given your weight... no offense i'd suggest ripping out that fat first. People who tell you fat goes, or turn fat into muscle are full of shit... fat cells always stay unless you get lipo and fat doesnt turn to muscle so get the heartrate between 115-130 and when over 130 watch it drop... I do 120-130 really im just trying to give a more safe advice. Body fat burns best at this BPM.... Sugar, Alcohol and as much as you can in terms of carbs cut for as long as you can or run killer carb cycles if you cant.

If you need any help with this reach out. I've been doing this for 15yrs. Its always good to get more than one opinion i've had alot of guys tell me shit that just isnt right. Best of luck to you ... oh one more thing ph water helps with the stomach acids.
