Thread: [\[SELLING\] Dick & Dave: Dual-Core Multi-Agent Async Orchestration Framework \(\\$350\)](#)

will.I.am92 - June 28, 2026, 6:44 pm

? TWIN-ENGINE COGNITION MATRIX ?
DICK & DAVE: DUAL-CORE ASYNC MONITOR
? HARDWARE LOAD COEFFICIENT: PARSED

? THE HYBRID INTEGRATION BREAKDOWN

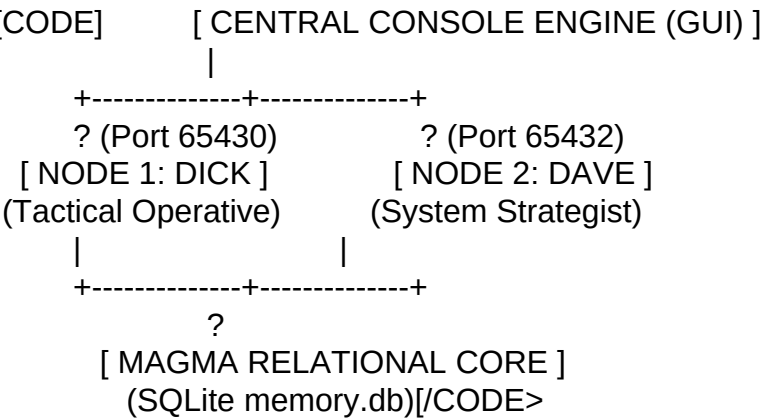

This codebase represents a functional prototype of a Cross-Platform Remote Monitoring, Telemetry, and Multi-Node Orchestration System. Built natively inside a streamlined Python framework, the architecture completely eliminates standard single-thread blockades, utilizing an interconnected hub-and-spoke network layer over localized socket bridges to manage administrative task handoffs fluidly.

The framework specializes in real-time environment validation and high-volume data ingestion, making it highly valuable as a custom utility suite for localized labs, automated workspace diagnostics, and custom software architecture simulations.

? COGNITIVE ARCHITECTURE & INTERPOLATION

- Separation of Powers (System 1 vs. System 2): Divides duties between a tactical operative node (Dick) and a strategic planner core (Dave).
- Epistemic Confidence Validation: Features a strict 0.85 programmatic safety filter pass for checking task parameters.
- Hardware Digital Twin Throttling: Computes machine load coefficients to prevent hardware redlining.
- MAGMA Storage Backbone: Employs a localized relational persistence core backed by SQLite.
- Recursive Plugin Reflection: Utilizes runtime code generation channels to hot-load custom python scripts on-the-fly.

? COMMUNICATIONS TOPOLOGY MATRIX

? SYSTEM OVERHEAD & SPECIFICATIONS

The complete framework occupies minimal disk footprint and operates on light system allocations. It features a complete Streamlit dashboard management interface layout and robust loopback socket configurations ready for local testing deployment pipelines.

? ACQUISITION & INTEGRATION OPTIONS
\$350.00 USD

Full proprietary source distribution. All transactions processed via verified middleman escrow protocols. Crypto assets (BTC, LTC, USDT) supported.
