Thread: [Looking for someone to reverse-engineer and decompile an APK and hack a specific serv](#)

OtterLover - July 1, 2026, 3:43 am

If you first meet the requirements we want and create it, we are prepared to offer a success bonus of \$2,000 to \$3,000.

The APK currently has app shilling and protections against encryption, rooting, emulators, and networks, and it is being updated every week or even every day.

The goal is to unpack the APK, analyze the vulnerable encryption portion, find the list of all users and vulnerabilities, and make it possible to run that APK through a website or program.

All transactions will be conducted through an HF contract.

Telegram can contact me the fastest.

Or please use HF PM or Conversation.

Telegram : [@krwick](#)

If you contact me via Telegram or HF chat, I'll provide information about the relevant program or details related to the project.

Hey, I am a professional reverse engineer since 2021, i am mainly specialised into exe files but i know very well how apk work, i can really help you with that.

Send me a dm if you are interested.

Best regards
