Just now tested a GB of the Mobile proxies.

Average quality, similar to any average vendor out there.

extremely False reporting of usage - 3x to 4x more data usage shown on the dashboard compared to actual consumption.

Card payments don't work. Card details are collected on the website itself without using any secure payment portal

Crypto payments worked flawlessly

1/5 rating

edit: vendor could be just a reseller of the avg. quality big proxy vendors. looking at the shady card payment setup I would rather just go with any trustable vendors out there as the quality is going to be disappointingly same.

We usually take feedback and do our best to work on our services but on this one there are many things I cant wait by

1. I would love to see your proof of the false reporting of usage and we can show you exactly the requests (bandwidth used).

2. And you are contradicting since you claim being a reseller and also inflating the bandwidth usage that a reseller should have access to changing or tampering with.

3. Our stripe is completely down hence there is no way you could have tested that, you would know if you would actually follow our telegram updates.

4. We and many others have fully tested and compared with all you major and "average vendors" and we beat them on almost every single comparison chart

ZinyNet - August 20, 2026, 4:32 pm

• Unflagged Subnets: Clean residential pools ready for Shopify, Nike SNKRS, Ticketmaster, and AXS.

- Low Latency (<100ms): Fast response times for restock monitors and rapid checkout tasks.
