VULNSCAPE

AI-Powered Offensive Security Suite

Find vulns. Hunt bounties. Generate leads. Get paid.

The all-in-one console built for hunters, pentesters & agencies who actually want to make money from security work.

STOP LOSING MONEY TO TOOL CHAOS

Most “security stacks” are a joke: 8 browser tabs, 3 half-broken scanners, a Notion dump, and zero pipeline.

Vulnscape replaces all of that.

Five real scan engines collect the evidence. SENTINEL AI (powered by Claude) turns scanner noise into severity-scored findings with copy-paste remediation. Then it helps you get paid — bug bounties, client audits, retainers, and a built-in lead engine that finds businesses who need security help right now.

This isn't a toy. It's a money machine for people who can actually test.

Live console — risk overview, severity, scans, SENTINEL AI in one glass cockpit.

EVERYTHING YOU NEED TO FIND, EXPLOIT & GROW

Website Scanner — headers, TLS, cookies, forms + a default-admin / dictionary credential probe that cracks weak logins and flags panels with no lockout as wide open to brute force.

Code Auditor — AI source analysis for SQLi, XSS, secrets, weak crypto, insecure patterns.

Dependency / CVE Intel — manifests matched against live vulnerability intel. Know what's exploitable before your client does.

Password Audit — entropy + breach checks. Raw passwords never leave the scan.

Network Recon — ports, DNS, SPF/DMARC, deep TLS. SSRF-guarded. Authorize-first.

Bug Bounty Discovery — continuously surfaces freshly shipped / vibe-coded apps and new programs. Nothing live-scans until YOU authorize.

Lead Generation — mines hiring signals across public job boards, then AI-qualifies companies as security prospects and dumps them in your CRM. Outbound on autopilot.

Client-Ready Reports — PDF / HTML / Markdown in minutes. Look expensive. Close faster.

Scan results + Ask SENTINEL AI — remediation without the Google rabbit hole.

TURN SKILL INTO CASH

Bug Bounties — hunt harder, report cleaner. Top payouts hit \$10,000+.

Freelance Audits — charge \$500–\$5,000+ per project for web / API / code assessments.

Consultancy — retainers, recurring revenue, 6–7 figure trajectory if you treat it like a business.

Agency Leads — stop cold-DMing randoms. Vulnscape finds companies that are hiring engineers right now (strong buying signal), qualifies them, and queues outreach.

Discovery alerts — new targets pushed to you, not hunted by you.

Lead engine screenshot — real AI-qualified prospects, not a fake mockup:

Leads CRM — JOBS · NEW, enrichment notes, source listings, pipeline statuses.

WHY OPERATORS SWITCH TO VULNSCAPE

Speed that matters — scan fast, AI-rank so you only chase findings worth money.

Human-grade analysis — SENTINEL AI explains impact, not “header missing lol”.

Cloud console — your ops room anywhere, anytime.

Hardened by design — login lockout, rate limits, CSP/HSTS, authorize-first gates.

Built for people who bill — discovery -> authorize -> scan -> report -> lead -> close.

PICK YOUR WEAPON

OPS — \$299/mo (or \$2,999/yr — save ~16%)

All 5 scanners · SENTINEL AI · monitoring · alerts · client-ready reports.

Perfect if you already have targets and want an unfair analysis edge.

BOUNTY — \$799/mo (or \$7,999/yr) ? MOST POPULAR

Everything in Ops + continuous Bug Bounty Discovery of newly shipped targets.

For hunters who refuse to waste nights on manual recon.

AGENCY — \$1,299/mo (or \$12,999/yr)

Everything in Bounty + Leads CRM & automated lead generation.

For freelancers and agencies turning findings into a client pipeline.

START FINDING. START EARNING. START GROWING.

VULNSCAPE — the offensive security suite that doesn't just find vulns...
it helps you get paid for them.

DM for access / licensing / onboarding.

Authorized security testing only. Built for researchers, pentesters, consultants & agencies. New features ship weekly.

[contract=tid]Start Contract[/contract]

MadScientist - July 12, 2026, 1:30 pm

I'm curious if you're releasing any vouch copies? Would be curious to test it out, either way though look forward to the reviews.

Yes, start a contract for a vouch copy and I will give you a week of the Ops as a trial for manually testing bug bounties, no auto find but you can search directly.

WraithTools - *July 18, 2026, 12:46 am*

We have updated the scanner to fully comply with HackerOne bounties.

We have added custom http headers, rate limits and proxy support.

WraithTools - *July 26, 2026, 7:55 am*

Heartbleed and Shellshock exploits added to the scan. Non destructive payload's are automated, destructive can be added manually.

WraithTools - *July 29, 2026, 1:34 am*

Implemented a sensitive information scanner, find API keys, Crypto Wallets and passwords that have been inputted into Ai chats.

We have added CTF and similar events on Hack The Box, use VulnScape to become the ultimate hacker and it's fully automated!

More exploits added.
