Thread: [I'm running a honeypot...](#)

cl0udzz - July 16, 2026, 2:32 am

Yeah the title is self explanative, I got a 5 dollar VPS and set up cowrie, I'm really just looking to see which techniques people are currently using when they get access, which binaries they load and such, not looking to report it to any CTI agency just learning!

I'm probably also going to make a blog post about it and drop all the stats, binaries, commands..

Wait for 1-2 weeks!!

DramaKing - July 16, 2026, 5:54 am

Nice. HF removed its blog section, but I look forward to seeing what you got.

And you can report attacks to AbuseIPDB.

Wake - July 16, 2026, 6:35 am

Will be interesting to see what you get, have you had any hits already?

ViewsEvaders - July 16, 2026, 6:40 am

pretty cool bro let us know what you get :D

So far only 1 ip that keeps logging in, and running "uname -a" every time...
