Thread: [Convo Images Exif Data](#)

Omniscient - July 18, 2026, 3:31 pm

I tried to make it happen last year with AI but it broke too much and I failed.

I took another look today because AI is certainly much better now. After a couple hours I have successfully done it without having to upgrade HF's backend (old NodeJS).

Currently it's only for the group convo. I will make the edits for private convo asap to remove the exif data.

This should help with privacy.

Feel free to test and LMK if you come across anything weird.

Thank you.

EDIT: Also now removed in private convo too. No more exif data in convo uploaded images.

I swore I remember Xerotic doing this already - it must have been for something else.

Nice change!

Pr0m3th3us - July 19, 2026, 8:43 am

Hell yea thanks for this.

@vrs@ would be crying.

No, I myself attempted to do this a while ago and ran into too many obstacles.

The effort this time paid off.

That's a great feature, bro . It does a much better job of protecting privacy. Thanks, Chief!
