Thread: [FreeMason WebBase C2 Platform Windows|Andriod|Linux|RAT|Crypter FUD](#)

Freemasons - July 18, 2026, 4:48 pm

Freemason RAT is a browser-native command center that lets you deploy, monitor, and control agents across Windows, Linux, Android, and macOS from a single dashboard. No complex infrastructure, no per-agent limitations, and no per-build caps.

Generate as many payloads as you need, whenever you need them. No per-build fees, no token limits. Compile Windows EXE/DLL, Linux ELF, Android APK, macOS binaries, and PHP webshells server-side, directly from your browser.

Spoiler ([Click to View](#))

Fleet Dashboard

- Real-time agent status overview (active/idle/dead)
- Agent count, OS breakdown, geo map, health timeline
- Filter and search agents by name, IP, OS, status

Terminal (Operator Console)

- Send commands to any active agent
- Shell execution, file download/upload, screenshot capture
- Credential harvesting (SAM dump, browser passwords, Windows credman)
- Keylogging, persistence installation, privilege escalation
- Command palette (Ctrl+K) for quick access
- Command history and full-text search across all agent output

Payload Factory

- Generate agents for Windows (EXE, DLL, Service), Linux (ELF), Android (APK)
- Configure sleep, jitter, kill date, domain fronting, obfuscation level
- One-click build — downloads immediately

Crypter PRO — Encrypt Tab

- Upload any file (EXE, DLL, script) and encrypt with multi-layer cipher chain
- Key methods: embedded, computed (binary hash + seed), environmental (hostname + MAC)
- Presets: Standard (1 layer), Double Wrap (2 layers), Triple Threat (3 layers)
- Choose stub language: Go, C/MinGW, Nim
- Execution methods: CreateThread, RunPE, Process Hollowing, Fiber, APC, Threadless
- Anti-analysis: VM check, debugger check, sandbox detection, sleep delay
- Auto-compiled on server — encrypted payload downloads instantly

Crypter PRO — Persistence Tab

- DLL Sideload (proxy DLL for Teams, Chrome, Slack, etc.)
- LNK Shortcut backdoor
- Registry Run Key persistence
- WMI Event Subscription (fileless)
- Windows Service DLL
- Installer Wrapper (trojanized setup)
- Office Template Macro (VBA)
- Startup Folder VBScript
- Linux Bash RC + Cron + Systemd

- All backdoors auto-compiled and encrypted server-side

Crypter PRO — EDR Bypass Tab

- Donut shellcode loader generation
- C/MinGW loader
- Go loader
- Nim loader
- Execution: CreateThread, Fiber, APC Queue, Threadless (EDR bypass)
- API hashing, WinHTTP stager, syscall variants
- Auto-compiled and encrypted on server

Crypter PRO — Binary Backdoor Tab

- Upload any EXE/DLL and backdoor it with your agent
- Preserves original icon, digital signature metadata
- 4 obfuscation levels: None, Light, Standard, Full

Files Tab

- Browse files downloaded from agents during operations
- Search, filter, download from browser

VNC Tab (Android)

- Real-time screen viewing for Android agents
- Stream at ~1 FPS for live monitoring

Loot Tab

- All captured credentials, screenshots, exfiltrated data
- Searchable by agent, type, date

What users get on every plan

- Unlimited payload generation
- Full Crypter encryption engine
- All persistence techniques
- EDR bypass loaders
- Binary backdooring
- Agent terminal with all commands
- All cipher chains and layers

Stealer / Credential Harvesting Functions

Available on the Terminal tab after selecting an active agent:

Windows Credentials

- creds — Run all credential modules at once
- creds browsers — Extract saved passwords from Chrome, Firefox, Edge, Brave
- creds windows — Windows secrets dump: SAM hive (local users), SECURITY hive (domain cached creds), Credential Manager (stored web/Windows creds)
- creds wifi — Extract saved Wi-Fi passwords from WLAN profiles

Browser Data

- Browser cookies — Extract cookies from

Chrome/Edge/Firefox profiles

- Browser history — Pull recent browsing history
- Browser autofill — Extract saved form-fill data (addresses, credit cards)

System Intel

- sysinfo — OS version, CPU, RAM, disk, hostname, domain-joined status
- netstat — Active network connections, listening ports, routing table
- ps — Running process list with PID, parent PID, path
- whoami — Current user context, group membership, privileges

Screenshot Capture

- screenshot — Capture screen of target machine, returned inline in terminal
- Right-click to save the screenshot image directly

Android Stealer (Android agents only)

- stealer:all — Run every enabled stealer module
- stealer:gps — GPS coordinates with accuracy and altitude
- stealer:contacts — Phonebook contacts list
- stealer:sms — SMS inbox (all received messages)
- stealer:calls — Call logs (incoming, outgoing, missed)
- stealer:camera — Front/rear camera capture
- stealer:apps — Installed applications list
- stealer:location — Last known location (WiFi/cell triangulation)

File Operations

- download <path> — Pull any file from target machine to C2 (appears in Files tab)
- upload <path> — Push a file from C2 to target machine
- fileget <path> — Read text file content inline in terminal

Price:

Basic

\$49/mo

For individual operators getting started

1 user account

C2 platform access

Web dashboard

Basic C2 profiles

Community support

Payload generatio (EXE)

Stealer function

\$99/mo

For professional red teams
5 user accounts
C2 platform access
Advanced C2 profiles
Custom payload generation(EXE,Andriod,Linux)
API access
Stealer function
Priority support

\$249/mo (Buy 1 and get another month free)

For large-scale operations
Unlimited users
C2 platform access
Crypter feature
Custom C2 profiles
On-premise deployment
Dedicated support
Full Platform Functionality

It doesn't work crypter I tried it and paid them \$20... and nothing works. They said they'd refund my money or fix something, but they didn't do anything... I don't recommend it.

ByteMe - July 20, 2026, 4:55 am

Yo I contacted you on telegram I want to buy the Enterprise package to get one month free respond to my questions thank you.
