Thread: [MotherFudder | Modular RAT & Loader | 26KB Stub](#)

violentwhy - July 18, 2026, 11:26 pm

MotherFudder

Advanced Remote Administration / Loader with a Custom Modular Architecture

MotherFudder is a modular loader and RAT built for both low-level and high-level users. It combines a lightweight C# stub (26 KB) with a modern web-based dashboard and a custom architecture that keeps deployment simple. Whether you need a quick remote shell or a full-featured C2 platform, MotherFudder delivers.

With the stub weighing in at just 26 KB (with startup), it's the lightest in the market, making it easy to embed into applications and crypt.

Motherfudder can be set up in two main ways:

## 1. Reverse Proxy (Recommended)

Purchase a VPS and set up a reverse proxy to connect to your preferred Windows machine. Run the Motherfudder executable locally over LAN or via 127.0.0.1, then configure the proxy to forward traffic accordingly. This approach keeps your local environment secure while exposing only the TCP port proxy to the internet.

## 2. Direct Hosting on a VPS

You can run the Motherfudder server executable directly on the VPS. However, note that Flask is not efficient for this use case. Once running, you can access the server either locally on the VPS or remotely from your own machine over WAN.

Important: Motherfudder currently requires all ports to be open, as each feature uses a dedicated port IF your gonna use it remotely. Motherfudder was originally designed for local use directly on the VPS. Remotely is possible but Its a bit complicated but it will make sense once you try it.

### Core Features

- Screen Viewer – Real-time smooth desktop streaming using delta encoding.
- Simple HVNC – Hidden VNC (Beta).
- File Manager – Full remote file operations: browse, upload, download, delete, rename.
- Remote Shell – Interactive command-line access on the target.
- Webcam Capture – Live feed from any connected camera.
- Process Manager – List, kill, suspend, and monitor running processes.
- Exodus KeyLogger – Stealthy keystroke logging targeting exodus for recovery.
- Stealer - Recover wallets, chrome passwords, games, V20 Decryption.
- And more coming soon..\*

### Execution & Payload Delivery

- Upload & Execute (Disk) – Drop and run executables directly on disk.
- Upload & Execute (.NET Memory) – Execute .NET assemblies entirely in memory – no disk writes.
- Upload & Execute (RunPE) – Process injection using RunPE technique.

- Auto-Task Variants – Automate executions on new client connections (RunPE and Disk variants).
- Built-in Client Builder – Customize mutex, hidden console, connection list, persistence, and crypter. generate ready-to-use stubs with one click.

### Advanced Capabilities

- AES-encrypted Communication – Traffic between client and server is encrypted.
- Lightweight & Modular – Add or remove DLL plugins without recompiling the core stub.
- Teamserver-Ready – The web panel can be exposed as a remote C2 server.

### Dashboard & Monitoring

- Real-time client list – See online/offline status, country, OS, active window, IP, uptime, and connected wallets.
- Context-sensitive commands – Right-click any client to send modules instantly.
- Live logs – Track all server events and client interactions.
- Statistics & graphs – Connection history, daily counts, top countries.
- Auto-task management – Define tasks that execute automatically when a client comes online.

### File Sharing Repository

- Centralised storage for files to be deployed to clients.
- Upload, download, and delete files via the web UI.
- Files are used as sources for all Upload & Execute actions and Auto Tasks.
- To host files up to a gigabyte aswell for direct link download.

### Technical Highlights

- Stub – C# (lightweight) or Python (flexible) (Working on it) – choose at build time.
- Web Panel – Flask-based, responsive, and compressed.
- Modular DLL Architecture – Each feature is a separate DLL loaded on demand.

### Pricing & Licensing

- Monthly Subscription – \$40 USD a month.
- More options coming soon.

### Disclaimer

MotherFudder is intended solely for authorised security testing and educational purposes. The developer assumes no liability\*\* for any misuse. Always obtain proper written permission before deploying on any system you do not own.

### Get Started

**MadScientist** - July 19, 2026, 12:48 am

Vouch copy? Either way use a middleman people. I'll MM for y'all. Just DM

**violentwhy** - July 19, 2026, 1:10 am

Sure. Lets do a Vouch copy. I am a new seller here. PM me.

**T3Ykz** - July 19, 2026, 2:28 am

W bro Looks Good

**DramaKing** - July 19, 2026, 3:48 am

There's already a Telegram crypter by that name. [motherfudder](#)

**violentwhy** - July 19, 2026, 4:17 am

(Jul 19, 2026 03:48 AM)DramaKing Wrote: [\[CITE\]](#) There's already a Telegram crypter by that name. [motherfudder](#)

Yes i know. i was supposed to post it in the motherfudder account but the owner is inactive. The owner was supposed to give me the account to sell MotherFudder Loader/RAT on it. But hes been really inactive.

i have src and its 100% ai

violentwhy - August 19, 2026, 9:34 pm

(Aug 19, 2026 09:51 AM)evelyn Wrote: [\[CITE\]](#) i have src and its 100% ai

I did use AI to help fix some bugs when I was stuck/confused, but the project itself isn't AI-generated. I wrote the majority of it myself, and I used AI mainly as a debugging tool. I also went through and read the source myself before distributing it, so I know what's actually in the code.

\_Bender\_ - August 20, 2026, 3:29 am

(Aug 19, 2026 09:51 AM)evelyn Wrote: [\[CITE\]](#) i have src and its 100% ai

Your comment make no sense: these days all devs in the industry use AI agents to code if they don't want to fall behind, and the fact that OP use AI doesn't mean that he doesn't know how to Code and the product is not HQ.

evelyn - August 20, 2026, 5:12 am

(Aug 20, 2026 03:29 AM)\_Bender\_ Wrote: [\[CITE\]](#) Your comment make no sense: these days all devs in the industry use AI agents to code if they don't want to fall behind, and the fact that OP use AI doesn't mean that he doesn't know how to Code and the product is not HQ.

It has only shell:startup autorun and no encrypting, the C2 and AES Key is in plaintext. It shows in task manager with 30% CPU usage when remote desktop is active and it easy to kill with it. No protection, and this all for a 40\$.

\_Bender\_ - August 20, 2026, 6:04 am

(Aug 20, 2026 05:12 AM)evelyn Wrote: [\[CITE\]](#) It has only shell:startup autorun and no encrypting, the C2 and AES Key is in plaintext. It shows in task manager with 30% CPU usage when remote desktop is active and it easy to kill with it. No protection, and this all for a 40\$.

Okay, these are valid criticisms and potential features that the OP could implement in the future, but they have nothing to do with the use of AI in coding: they are design choices made by a human.

violentwhy - August 20, 2026, 9:47 pm

(Aug 20, 2026 05:12 AM)evelyn Wrote: [\[CITE\]](#) It has only shell:startup autorun and no encrypting, the C2 and AES Key is in plaintext. It shows in task manager with 30% CPU usage when remote desktop is active and it easy to kill with it. No protection, and this all for a 40\$.

I don't think that's a fair assessment. Motherfudder was also intended to function as a loader, so the stub is intentionally basic because it was designed to be crypted. Additional encryption methods are also planned.

As for the 30% CPU usage claim, that doesn't reflect the normal behavior I've seen, especially when RDP is active.

And regarding the \$40 price, I think it's pretty reasonable for what's being offered. For comparison,

Crocus RAT is around \$80/month and is still fairly basic. No offense to them or their project, but \$40 for Motherfudder is a pretty fair price in comparison.

Yeah, exactly. That's what I was trying to get across. Using AI doesn't suddenly mean you don't know how to code or that the product is low quality. Appreciate you clearing that up.

**evelyn** - August 21, 2026, 1:33 am

Why not add a AMSI/ETW bypass and use .NET Reactor 7.3 for obfuscation, because confuserex is easy to deobfuscate? This would make the project a worthy competitor to other RATs. Also a good cryptor can crypt any stub.

**violentwhy** - August 21, 2026, 10:40 am

I was planning to add the AMSI + ETW Bypass. Plus i will use a modified version of confuserex thats not really easy to deobfuscate.

In defence, .NET Reactor is probably easier to deobf with Slayer. And it has more signatures when scanned by AVs. Other than that points are valid

Public deobf tools dont work on .NET Reactor 7.3-7.5

**periodoinicio** - August 25, 2026, 3:44 pm

The project is interesting, my friend. I want to buy, but I can't send you a private message; could you please contact me?

**violentwhy** - August 26, 2026, 6:50 pm

(Aug 25, 2026 03:44 PM)periodoinicio Wrote: [\[CITE\]](#) The project is interesting, my friend. I want to buy, but I can't send you a private message; could you please contact me?

You'll have to start a contract first due to the platform rules. Once you do, I think I'll be able to PM you.

**x64assembler** - August 27, 2026, 1:58 am

(Aug 25, 2026 11:33 AM)evelyn Wrote: [\[CITE\]](#) Public deobf tools dont work on .NET Reactor 7.3-7.5 Sure, but the signatures of .NET reactor will remain and they are far dirtier than confuser somehow

**violentwhy** - August 27, 2026, 3:18 am

(Aug 27, 2026 01:58 AM)x64assembler Wrote: [\[CITE\]](#) Sure, but the signatures of .NET reactor will remain and they are far dirtier than confuser somehow

The solution is to add a AMSI and ETW bypass. Also Ring 3 hooks remover. on the payload (Checking if that exists).

**ars67** - September 17, 2026, 7:45 am

how do i purchase this?
