Thread: [SMS Verification Codes - Real Carrier Numbers, 1,300+ Services, From €1.95](#)

NordSecure - July 19, 2026, 10:56 am

NordSecure - SMS Verification Codes

Receive a verification code on a real mobile number that was never tied to your name. From €1.95.

??

WHAT THIS IS

A one-time number for sign-ups, password resets and two-factor codes that you do not want landing on your own number.

Real carrier number, not VoIP. That is exactly what services check when they decide whether to accept a number, and it is why delivery rates here beat services reselling internet numbers.

1,300+ services supported. Signal, Telegram, WhatsApp, Google and Gmail, Discord, ProtonMail, Instagram and Threads, [BRAND NAME REMOVED], and a long list beyond those.

No name, no address, no ID, no account. No email required either. You get an Order ID and a PIN, and that is the entire relationship.

Card or crypto. BTC, XMR, LTC, ETH, USDT accepted.

Your own number stays where it is. Nothing touches your existing SIM.

??

HOW IT WORKS

Search for the service you need the code from.

We check every country that can supply a number for that service, look up how often codes actually arrive from each, and put the best first. You can override the choice, but the top option is the one most likely to work.

Pay. The number appears on screen straight away.

Request the code from the service. It usually lands in under a minute.

Buy the number first, then request the code. Not the other way round - the twenty minute clock starts the moment the number is issued.

??

READ THIS BEFORE YOU BUY

Quote:

1. Codes do not always arrive. Every order includes up to three numbers - if one receives nothing inside its twenty minutes, you can request the next at no extra cost. If all three fail, the order cannot be credited back. We are charged per number whether or not a code is sent, which is why there is no refund.
2. The delivery rate is shown before you pay. It is the supplier's own figure for that exact service and country - how often a code genuinely arrives. Some popular services sit near a coin flip because they actively block numbers like these. The real number is on screen before you commit. Treat it as the actual odds, not marketing.
3. The number is single-use. It receives one code for the service you chose, then expires after about twenty minutes. It cannot take a second code later, it is not yours to keep, and it cannot be used to recover the account afterwards.
4. Do not make it an account's only recovery route. Once the number is gone, any account depending on it for password resets or two-factor codes is locked out permanently. There is no way back.
5. Not for banking or anything financial. Banks and financial services reject this kind of number as a matter of policy, and the permanent lockout risk above makes it a bad idea regardless.

??

NEED MORE THAN ONE CODE?

Buy a phone plan instead. If you need to receive more than one code, or will ever need the number again, a plan works out cheaper than repeat one-time codes - and you get a number you keep for weeks or months with calls, texts and data on it.

Plans start at €7.70 here: [deleted]

??

PAYMENT AND SUPPORT

Price: From €1.95 per code, varies by service and country

Payment: Card, or BTC / XMR / LTC / ETH / USDT

Delivery: Instant. The number appears on screen as soon as payment clears.

Retries: Up to three numbers per order at no extra cost

Refunds: None on failed codes - see the section above

Support: support@nordsecure.eu - quote your Order ID

Service status: [\[deleted\]](#)

Middleman: Accepted on request if you prefer.

This is a bump! [warn] [warn]

Stanley - *July 19, 2026, 3:58 pm*
I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley
