Thread: [\[open source release\] requiem discord rat \(golang\)](#)

StormCane9 - July 28, 2026, 8:36 pm

Current features:

- Made in Golang
- Super customizable web panel (runs on linux too)
- Take screenshots and webcam pictures
- Adjust system and display settings
- Various file related utilities
- Self updating
- Macro system
- Runtime settings system
- Securely wipe from the device
- Many persistence techniques

Current commands:

- msgbox - Displays a messagebox.
- input - Block or unblock inputs to the device.
- site - Block or unblock websites.
- jumpscare - Displays a picture on the screen for a short time.
- ping - Test command.
- critical - Makes this a critical process.
- run - Run apps on the device.
- rotate - Rotates the device display.
- audio - Plays audio.
- volume - Sets the device volume.
- tts - Play text to speech audio.
- update - Updates this.
- upload - Uploads files from the device to the server.
- wallpaper - Sets the device wallpaper.
- bsod - Triggers the blue screen of death.
- file - Do things with the files on the device.
- macro - Set macros to execute multiple commands at once and more.
- settings - Edit runtime settings.
- uac - UAC related utilities.
- wipe - Removes this from the device.
- download - Downloads a file from the server to the device.
- persist - Persists or re-persists this if it was disabled.
- brightness - Sets the device brightness.
- process - Block or unblock processes.
- ss - Takes a screenshot.
- tree - Generates a file tree.

More features and commands will be added soon!

(Visuals are in the README)
