Thread: [Bots on DCRAT are losing connection for unknown reasons.](#)

skynetT1000 - July 30, 2026, 5:11 am

I am using a VPS that hosts the DCRAT panel. All connections were working normally.

At 15:13 today, I received a series of new bot connections. I thought they were stuck somewhere and only managed to connect at that time. The old connections were still working normally.

However, at 15:30, the new connections were disconnected all at once.

I do not understand why they are disconnecting in bulk.

I have completely removed the antivirus on the VPS hosting the panel and turned off all firewall features.

I also restarted the VPS, but the new bots that appeared at 15:13 have not reconnected.

Is there any solution?

That's weird, can't be a port forwarding issue?
