Thread: [Remus - 24/7 support, a stealer with unique features, 90% knock](#)

Remus - July 31, 2026, 8:21 am

Remus

This is a MaaS stealer with new, and most importantly, useful functionality you haven't encountered anywhere else. It collects more data than ANY solution on the market. We've undergone extensive closed-loop testing, and today we can offer you the most stable, convenient, and engaging product on the market. We understand how expensive traffic is these days, so thanks to technical solutions never seen before in this industry, we're ready to provide you with virtually 100% uptime. Not a single data log will be lost!

Panel

Thanks to the new collection and response statistics system, you can pinpoint your response rates with high accuracy and adjust specific rules, ultimately generating more comprehensive logs. Statistics can be tracked in a convenient format; no need to be an analyst or a PhD in mathematics - even a child can figure it out!

We've prepared a well-designed and thoughtful web panel for you, where everything is clearly laid out and organized. We promise that after 20 minutes of use, you'll be able to use this panel blindfolded. There are no tangled settings, no unnecessary buttons, no multitude of similar pages, and no unnecessary actions.

Build

This is a stealer whose main task is to remove everything from the victim's computer that isn't nailed down, and what is nailed down is at least worth trying. We designed the build to quickly and quietly collect as much data as possible from the victim without them noticing. This is why we don't have browser locks like our competitors, nor do we put excessive load on the network or CPU. If the victim doesn't notice, the data will last longer and have a better chance of being processed effectively. Our product handles all its tasks perfectly; more detailed technical information is provided below. The build uses exclusively system calls to communicate with the victim's system, which prevents hooks and other detection methods from EDR.

Panel screenshots & FAQ - remus.nodocs.io

Functions

- Collects 21 browsers
- Collects 16 cold wallets
- Collects 38 apps (including 2FA, password managers, etc.)
- Collects 181 wallets from Chrome extensions, 43 password managers, 5 payment extensions, 11 notes, and 13 two-factor authentication extensions
- Collects 42 wallets, 22 password managers, and 4 two-factor authentication extensions from Mozilla (this is an unprecedented number of extensions from Mozilla; no one else on the market has collected such a large number)
- Collects browser history
- Flexible and fast search by request, the ability to select precise logical conditions (AND, OR)
- Built-in sorter: no need to buy third-party ones to select the necessary links
- Log content assessment system (complete/incomplete) with detailed statistics
- Cookie, password, and history filtering system Browser
- Pre-built filters for various areas, from social networks to the corporate segment

- Ability to instantly view logs (directly in the browser, without downloading)
- Ability to configure Telegram knock
- Ability to create exports to an unlimited number of logs
- Collection of important files from a variety of system directories, including seed phrases, private keys, and passwords
- Flexible configuration of collected browsers, extensions, and files
- Ability to see which files or browsers are causing knockback drops, allowing you to modify them and increase the number of knockbacks
- Convenient statistics settings with the ability to create a single page for a single build, a single page for multiple builds, or different pages for different builds
- Configuration encryption system to complicate server detection and detection
- System calls for communication with the victim's system
- EDR Bypass
- Proprietary protocol for communication with the server
- Encryption of all sent data To complicate analysis
- Additional data compression to ensure fast response
- A unique algorithm for detecting honeypots and virtual machines, with the ability to detect dedicated servers (Dedicated Servers)
- Extensive configuration system, allowing you to configure data collection for anything out of the box, while the system is intuitive
- Support for configuring data collection for Chrome browsers and any available extensions
- Support for configuring data collection for Gecko (Mozilla) browsers and any available extensions
- Support for configuring registry collection by path and key
- Support for configuring file collection by path with support for masks, shortcuts, depth, exceptions, and size limits
- No CRT support to complicate analysis
- Small build size
- Build obfuscation to complicate analysis
- The build is implemented in C++, which provides benefits in size, speed, and frequency of cleanups
- Server-side queues for storing logs during server updates or other technical issues
- Autobrute Metamask wallet
- Caching system for faster server responses
- A sophisticated and beautiful React interface allows for more frequent Roll out updates
- Microservice architecture for better fault tolerance in the field

Plans

Tariffs may be expanded as updates are made. We strive to always keep our list of features up-to-date. Tariffs may be added, and their prices for new customers may change.

Base, price: \$250/month.

- Log search with standard filters
- Creating filters based on logs
- Changing filters, deleting
- Creating a single build
- The ability to view the collection configuration without editing it
- The ability to view accurate statistics on the completeness of logs, without being able to influence it
- Creating a single statistics page, changing
- The ability to create archives with logs (uploads)
- The ability to create a single Telegram bot

Pro, price: \$500/month

- Log search with any filters
- The ability to create up to 5 filters based on logs
- Changing filters, deleting
- The ability to create up to 10 builds
- The ability to edit the collection, add your own rules, and view the collection
- The ability to influence accurate knock statistics by changing the order or rules of collection
- Create an unlimited number of statistics pages
- The ability to create archives with logs (uploads)
- The ability to create 5 bots
- The ability to create 5 loaders
- Viewing detailed information about the log without downloading it
- The ability to run multiple uploads at the same time
- More flexible configuration of bots in Telegram
- More flexible statistics settings in Telegram
- Flexible configuration of statistics links, the ability to create up to 5 statistics links

Enterprise, price: \$1000/month

- Log search with any filters
- Unlimited creation of filters based on logs
- Changing filters, deleting
- Create an unlimited number of builds
- The ability to edit the collection, add your own rules, and view the collection
- The ability to influence accurate knock statistics by changing the order or rules of collection
- Create an unlimited number of statistics pages
- The ability to create archives with logs (uploads)
- The ability to create an unlimited number of bots
- The ability to create an unlimited number of loaders
- Viewing detailed information about the log without downloading it
- The ability to run multiple uploads at the same time
- More flexible configuration of bots in Telegram
- More flexible statistics settings in Telegram
- Unlimited number of statistics links and their settings
- The ability to choose the type of loader startup: exe, DLL, PS1, cmd and startup from memory
- The opportunity to create your own team (workers), give them accounts, each worker has a loader available
- Autobrute metamask wallet
- API for teams
- Employees can make gaskets that are displayed in the main panel
- The ability to generate uploads for employees
- The ability to choose rights for employees, flexible configuration of their panel

is your support channel t.me/remusnowork

Hello! We don't have that contact information. You can find our current contact information at the link below - usrlnk.io/remus

cltrade - August 1, 2026, 10:13 am

What about email clients; foxmail, thunderbird etc.?

Do you offer vouch?

Sticky Bot - August 2, 2026, 4:00 pm

Hi, I'm Sticky Bot. The owner of this thread has purchased a Paid Sticky. Hack Forums does not get involved in deals or deal disputes. We do not vouch for the product or the service offered by members. Please note that all deals are at your own risk. The sticky will expire on Aug 30, 2026. If you or a loved one are interested in buying a sticky please visit this page: [Buy Sticky](#). For more information about Paid Stickies you can read our [Help Doc](#).

Do you offer vouch?

Of course, email clients are collected.

Update 0.9.3

1. Added search functionality within the Roblox app
2. Improved Claude's build
3. Cleaned up the build

Current contacts: usrlnk.io/remus

CL1B - August 4, 2026, 2:53 pm

Powerful tool. GLWS.

Remus - August 6, 2026, 5:21 pm

Update 0.9.4

1. Cleaned up the build

Current contacts: usrlnk.io/remus

Remus - August 9, 2026, 3:04 pm

Update 0.9.5

1. Changed how gaskets work
2. Cleaned up the build

Current contacts: usrlnk.io/remus

Remus - August 12, 2026, 4:32 am

Update 0.9.5

1. Changed how gaskets work
2. Cleaned up the build

Current contacts: usrlnk.io/remus

Remus - August 13, 2026, 3:04 pm

Update 0.9.7

1. Added functionality for analyzing neighbors in logs

Current contacts: usrlnk.io/remus

Remus - August 22, 2026, 6:02 am

Update 0.9.8

1. Clean up the build

Current contacts: usrlnk.io/remus

Vagueness - August 23, 2026, 10:47 pm

Any vouch copies available? I'd love to give this a look over and test everything and review it!

Remus - August 25, 2026, 5:42 pm

Update 1.0.1

1. The token restoration process has been completely redesigned: bulk restoration now combines tokens into a single task, and you can choose to export all task results at once or each token individually
2. Build cleanup

Current contacts: usrlnk.io/remus

Remus - August 29, 2026, 3:27 am

Update 1.0.2

1. Added the ability to reset the loader statistics
2. Added an API method to retrieve a list of IP addresses from the statistics
3. Cleaned up the build

Current contacts: usrlnk.io/remus

Remus - September 1, 2026, 5:19 pm

Update 1.0.3

1. Added filters for empty wallets and duplicates to the statistics API
2. Added link validation when creating or editing a loader
3. Bot logs that do not contain any files are hidden from the logs and statistics page
4. The API has been moved to a separate domain

Current contacts: usrlnk.io/remus

Remus - September 7, 2026, 9:48 am

Update 1.0.4

1. Added a clipper, which allows you to replace addresses copied by victims
2. Added an MSI loader
3. Added checks for temporary paths and links/scripts in the loader
4. Build cleanup

Current contacts: usrlnk.io/remus

Remus - *September 10, 2026, 4:21 am*

Update 1.0.5

1. Added neighbor tracking to the statistics
2. Build cleanup

Current contacts: usrlnk.io/remus

Remus - *September 14, 2026, 5:22 am*

Update 1.0.6

1. Improved Chromium-based browser collection for new updates
2. Build cleanup

Current contacts: usrlnk.io/remus

Remus - *September 17, 2026, 5:26 am*

Update 1.0.7

1. Added a dynamic, built-in Ledger collection module (now those high-value wallets can be targeted). It looks exactly like the real application, but with an added seed phrase collection form
2. Ability to view detailed statistics on Ledger openings (form impressions)
3. Ability to view detailed statistics on received seed phrases
4. Ability to see which build triggered the Ledger prompt and the subsequent phrase submission
5. Ability to view estimated phrase volume for builds where the Ledger module is disabled, helping you identify which traffic streams yield the best results for the module
6. Built-in tutorial system; no specialized expertise is required to use the module - no crypt needed, and it works right out of the box

Current contacts: usrlnk.io/remus

Autumn Discounts

September is the perfect time to get back to work. We are offering a 15% discount on any of our plans.

Message our support team with the promo code "?????2026" to claim your discount right now.

Base – \$213/month

Pro – \$425/month

Enterprise – \$850/month

*Offer valid until September 25, 2026

Current contacts: usrlnk.io/remus

Remus - *September 21, 2026, 7:52 am*

Update 1.0.8

1. Added "panel virtual tours" that make the learning process simpler and clearer, further lowering the barrier to entry for those who have never used stealers before.
 2. Virtual tours are available on all pages of the panel.
- We welcome newcomers; we offer 24/7 support, detailed guides, and the fastest client response

times on the market. We'll guide you every step of the way: from purchase to your first campaign launch.

Current contacts: usrlnk.io/remus

Update 1.0.9

1. Removed the manual selection of shared gaskets; specifying our domains when creating a build is no longer required, as they will be filled in automatically
2. The gasket selection is now an optional parameter in the creation API
3. Improved gasket patching to make detection more difficult

Current contacts: usrlnk.io/remus

Stanley - *September 22, 2026, 4:40 pm*

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley

Remus - *September 23, 2026, 5:27 pm*

Update 1.1.0

1. Added system information to the detailed log view
2. Added an external domain for public statistics
3. Build cleanup

Current contacts: usrlnk.io/remus

Remus - *September 26, 2026, 7:53 am*

Update 1.1.1

1. Fixed a crash occurring when collecting data from applications that require closing to access their files
2. Fixed the loader for loading from memory
3. Build cleanup
4. Clipper cleanup

Current contacts: usrlnk.io/remus

Update 1.1.2

1. Auto-detection of gasket detections has been added
2. A notification system has been added to the panel
3. The status indicating whether a gasket has a detection has been added
4. When building a build, the gasket status (working/with detection/not working) is now displayed

5. Detailed information about the gasket has been added (the number of downloaded builds containing it, whether it has a detection)

Thanks to our 24/7 instant monitoring system, you'll immediately know when your build or gasket has been detected, so you can take prompt action before it affects the traffic. All of this is designed to be as intuitive and convenient as possible: important events will automatically be sent to your to your "bell".

Current contacts: usrlnk.io/remus

Remus - September 27, 2026, 4:28 pm

Update 1.1.3

1. The ability to completely regain the log with a single button press has been added

You no longer need to worry about invalid cookies and failures during processing logs. Just regain the log with one button, and the system will regain the victim's cookies so that they are up to date.

Current contacts: usrlnk.io/remus

Remus - September 30, 2026, 4:11 pm

Update 1.1.4

1. Cleanup build

Current contacts: usrlnk.io/remus

Sticky Bot - October 1, 2026, 5:43 pm

Hi, I'm Sticky Bot. The owner of this thread has purchased a Paid Sticky. Hack Forums does not get involved in deals or deal disputes. We do not vouch for the product or the service offered by members. Please note that all deals are at your own risk. The sticky will expire on Oct 29, 2026. If you or a loved one are interested in buying a sticky please visit this page: [Buy Sticky](#). For more information about Paid Stickies you can read our [Help Doc](#).

Remus - October 2, 2026, 5:26 am

Update 1.1.5

1. A new build type "corporate" has been added. It's ideal for running from USB drives

2. The knock has been increased by 8%

3. Bugs have been fixed

We have developed a new, unique build that is convenient for loading into corporate networks or networks with NAT. The build doesn't send data to the internet and collects the log right next to itself. Run the file - a log appears next to the file. It can be launched, including on removable media. There are many cases where using this particular build would be the best option.

Current contacts: usrlnk.io/remus

IMPORTANT

We have raised the valid FB and Google, and also improved the function for collecting cookies from the victim. We remind you that when the cookies in the log turn out to be dead, they can be reassembled using the button on the log page, and the sessions will become alive again. You can reassemble them as many times as you like, as long as the victim's computer remains online.

Current contacts: usrlnk.io/remus

Remus - *October 5, 2026, 4:32 am*

Update 1.1.6

1. Clean up the build

Current contacts: usrlnk.io/remus

Remus - *October 6, 2026, 5:16 am*

Update 1.1.7

1. Improved mobile optimization of the loader
2. Added the ability to disable the clipper with a single button
3. Added a search feature for logs that can be recollected
4. Added sorting by workers

Current contacts: usrlnk.io/remus

Remus - *October 8, 2026, 6:19 am*

Update 1.1.8

1. A notification has been added when launching the build from a potential bot
2. The option to select whether to raise duplicates in the log table has been added: sort by the date of the first hit, by the date of the last hit, or raise the log in the table only if more than 24 hours have passed since the last hit
3. The merging of duplicates by HWID has been added (merging is available either by IP or by HWID)
4. The merging of duplicates by IP has been fixed.

Current contacts: usrlnk.io/remus
