Thread: [iPhone Apple ID password recovery](#)

fest369 - August 1, 2026, 6:23 am

Hi,
is it possible to recover access to Apple ID (get password) having those:

- Apple ID
- Apple recovery key! generated some time ago
- Iphone device serial number

The point is, I am the husband, and father of two girls, lots of iphones since few years (I am using the oldest one, but they ask to change hardware, email, phone number... don't ask me why, but it happened through the years and now... I need to access one Apple ID from the past. Actually I need to login to iCloud and recover photos / videos, from the time my first daughter was born 12 years ago...

It's there, but it's all I have (and I know assigned email address, but no password for that old email, no remind option (it's google email)).

I used few times an official way on [Apple iforgot.apple.com](#)... but this "safe" time when I was supposed to wait for account recovery ability (the last final option with recovery key, and wait for the contact (phone call or email from Apple) - it never comes,

Any ideas, suggestions guys?

I could even pay to someone skilled in mobile phones, IT, recovery data, backup etc

Greetings

An iPhone serial number is irrelevant. Your only chance is the recovery key or [iforgot.apple.com](#).

Also try going to an Apple store. They might be able to help you. Somehow they got into my mom's laptop that had been sitting around for 5 years or so.
