NLOSMM - August 5, 2026, 5:36 pm

UFOGrowth — Custom Automation Software & Web Development

We're a software studio. We build the tools that do the repetitive work: multi-account platforms, detection-resistant browser automation, device farm controllers, scrapers, bots, dashboards and full SaaS products.

Most projects start the same way. There's a process someone does by hand every day. Managing dozens or hundreds of accounts. Copy-pasting between platforms. Running the same sequence of clicks over and over. We build the software that does it instead, and you own it when we're done.

Everything is written from scratch, in-house. No white-labeling, no outsourcing, no reselling someone else's tool.

????????????????????????????????????

Our Own Products

We don't only build for clients. We ship and maintain our own platforms, which is where most of our experience comes from.

XLegend

Windows platform for managing and automating large fleets of X accounts. Isolated browser identity per account, task orchestration, AI-written content trained per niche.

RLegend

Licensed Windows platform for Reddit account management and automation. Real fingerprinted browser sessions driven over DevTools Protocol, rotating mobile IPs, karma and activity analytics.

IGFarm Studio

Controller for physical Android device farms, driving Instagram actions on real hardware through vision-based automation.

All three are complete, licensed products with hardware-bound activation, silent auto-updates and built-in diagnostics. That's the standard client work gets built to as well.

????????????????????????????????????

What We Build

? Multi-account management platforms

One dashboard over many accounts. Credential storage, separate browser profile per account, proxy binding, session state, bulk actions, live status tracking.

? Detection-resistant browser automation

Real browser sessions driven programmatically through antidetect profiles. Consistent fingerprints, human-like input timing, randomized pacing, behavior variance.

? Device farm controllers

Software that drives racks of physical Android devices, including vision-based action execution when there's no API to work with.

? Task and job engines

Concurrent execution with thread limits, priorities, scheduling, retry logic with backoff, streaming logs, per-run analytics.

? AI content and vision pipelines

LLM integrations for writing, replying, captioning and classification. Per-project tone rules, cost tracking, preview before anything goes live.

? Scrapers and data pipelines

Structured extraction at volume with proxy rotation, deduplication, scheduled runs, clean exports to your DB, sheet or CRM.

? Proxy infrastructure

Pool management, health and latency checks, per-account binding, rotation logic, IP verification before each session.

? Bots and integrations

Telegram and Discord bots, Chrome extensions, webhook plumbing, API integrations between tools that don't talk to each other.

? Web apps, dashboards and SaaS

Internal tools, client portals, reporting dashboards, full SaaS with billing and user management. React front ends on Python or Node back ends.

? Licensing and distribution

If you plan to sell what we build: hardware-bound licensing, activation server, auto-update channels, installers, crash reporting.

? Rescue work

Someone else built it, it half works, and they've vanished. Send it over and we'll tell you straight whether extending or rebuilding is the better call.

????????????????????????????????????

Pricing

Every build is quoted from scope. Ranges below are approximate and negotiable once we know what you actually need. You get a fixed quote in writing before anything starts.

Small tool — \$800 – \$2,000

Single-purpose automation, simple interface, one platform, one workflow.

Standard build — \$2,500 – \$7,000

Desktop or web app with a real UI, database, multiple action types, proxy support.

Full platform — \$8,000 – \$25,000
Multi-account platform with antidetect browser layer, concurrent task engine, AI content pipeline, analytics. XLegend / RLegend class.

Device farm system — \$10,000 – \$30,000
Controller software for physical device racks, including vision-based execution.

Licensing layer — \$1,500 – \$5,000
Hardware-bound licensing, activation server, auto-updater, installer.

Scrapers, bots, integrations — \$600 – \$6,000

Web app / dashboard / SaaS — \$3,000 – \$20,000

Monthly maintenance (optional) — \$400 – \$1,500/mo
Platforms change and break automation. This covers fixes, updates and support.

??

How It Works

1. Talk — Tell us what the process looks like now and where it hurts. Free, no obligation.
 2. Scope — Within a few days you get it in writing: what gets built, cost, timeline, what's out of scope.
 3. Build — Working build to test at the end of every milestone. No single big reveal at the end.
 4. Handover — Source code, docs, walkthrough call, admin access. No lock-in. You own it.
- ??

Delivery Times

Small tool or single automation — 3 to 10 business days
Standard build with UI and database — 2 to 4 weeks
Full platform — 5 to 10 weeks
Device farm system — 6 to 12 weeks
Licensing layer — 3 to 7 business days

Clock starts once scope is agreed and we have whatever access the build needs. If something runs late you hear it from us before the deadline, not after.

??

Payment

BTC, USDT, LTC, XMR
Wise
Card via Stripe

Milestone based — 50% up front, 50% on delivery. Larger platforms split across more milestones.

Middleman welcome on any deal. If you'd rather run it through an official HF middleman, we'll cover our half of the fee. No argument, no pushback.

??

Terms & Refunds

- ? Haven't started work yet? Full refund of anything paid, no questions.
- ? We miss the agreed date and it's on us? Wait or take a full refund of the current milestone.
- ? Delivered build doesn't do what the agreed scope says? We fix it. Can't fix it in 10 business days, that milestone is refunded.
- ? Work already completed and delivered to scope isn't refundable, and neither is a change of mind after a milestone is accepted. We'll always talk it through first.
- ? Refunds handled directly by us within 5 business days of agreeing to one.
- ? Chargeback fraud gets reported to staff with full logs. Deal honestly and so will we.

??

FAQ

Do I own the code?
Yes. Source and full rights. We don't resell your build to anyone.

I don't know exactly what I need.
That's most first conversations. Describe the manual process and we'll propose what to automate first.

How detection-resistant is it really?
Antidetect browser profiles, consistent fingerprints, per-account proxies, human-like input pacing, tested against the checks that matter for your target. What nobody can honestly promise is that any tool stays ahead of a platform forever. Detection changes and tooling has to be maintained alongside it. Anyone telling you otherwise is selling you something.

Which platforms have you worked with?
X, Reddit and Instagram in depth, plus Android device automation. Others case by case.

Can you extend something I already have?
Usually yes, if the codebase is in reasonable shape.

Vouch copies?
Not for full custom builds, since every one is unique and takes weeks. What we can do is walk you through our own live platforms on a call so you can judge the work before paying anything. For small tools we'll consider a discounted first build in exchange for an honest review.

Who does the work?
We do, in-house. Nothing outsourced.

??

Contact

PM me here on HF — fastest, and it keeps a record on-site
Telegram — <https://t.me/spawnerlo>
Email — [email=hello@ufogrowth.com]hello@ufogrowth.com[/email]
Site — <https://ufogrowth.com>

Send a short description of the process you want automated. You'll get a reply within 24 hours with either a quote or the questions needed to give you one.

????????????????????????????????????

Vouches and completed work get posted below. Feedback appreciated either way.

Stanley - *October 19, 2026, 6:55 am*

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley
