Thread: [Can not see inbox, sent, drafts etc...](#)

**The Pact** - August 6, 2026, 3:45 am

I can read messages, but for days now I cannot go look at my inbox, sent box, drafts. If I try I only see the words "private messages" at the top and the site background now.

Have you tried a different browser or device?

What about these direct links?

<https://hackforums.net/private.php?fid=1> (INBOX)

<https://hackforums.net/private.php?fid=2> (SENT)

<https://hackforums.net/private.php?fid=3> (DRAFTS)

Also maybe accidentally closed the left Nav menu. Are you mobile or desktop?

Seems to load fine, but no messages show. However, I probably haven't sent one in years.

All three links work fine for me. I am using a mobile device (chrome).

Same. I'm on safari mobile.

**The Pact** - August 8, 2026, 12:29 am

On a laptop I can now see the messages but things have just changed so that I have to scroll down a lot to actually see them. I assume it's the new server. It's not a problem now that I can see them, but if anyone else gets this problem you now have to scroll down a fair bit to actually see messages otherwise at first you may think the messages and folders are gone.

[Edited only for a typo.]

If it was server then it should affect everyone? I see everything normal on Chrome, Brave on PCs & DuckDuckGo on phone.

1) we're not on the new server yet

2) give me a screenshot

3) it's definitely only you

Is your browser like zoomed in a whole bunch? That's my guess. Either that or some weird add-on messing things up. Try to use your browser "in private" window

It's all fine now. Yes it was probably zoomed in a lot, and I do have a lot of add ons. For some reason it's all back to normal now on my laptop.
