Thread: [Rotating proxy](#)

PageUp2win - August 8, 2026, 12:57 am

There are 2 things i want to ask:

1. Is it possible to buy a VPS, for example, from Hetzner and then somehow convert the /64 subnet into a working rotating proxy which I could use for botting?
2. Does anyone know a guy or a site where I could get a rotating proxy with high bandwidth for cheap or even possibly free?

Thanks for your time.

It's possible and easy with 3proxy or similar tooling, but for it doesn't beat buying multiple servers as 1 abuse flag will tank your entire /64 net vs true rotating proxy offer real resilience.

It's not worth offloading this kind of stuff to some third party, it's never recommended either; DIY it takes no longer than 1 week to learn.

Yes, grab a Hetzner VPS with a /64 IPv6 subnet and use a script like Auto-ipv6Proxy or MeshProx to turn it into a rotating proxy server. For paid cheap proxies, check Rapidproxy (\$0.65/GB) or DataImpulse (\$5/10GB).

Free ones try FlareGun/FlareProx, just keep in mind these are datacenter IPs, not residential, and aggressive botting may get your whole /64 subnet blocked.

Also isn't 5/10gb from dataimpulse also data center proxies as an intro plan,
