Thread: [RAT / Crypto Miner Noobie Questions | Help](#)

Wheezy Gang - August 9, 2026, 2:06 pm

Good day all,

I'm looking to get into the RAT/miner scene. I am wondering if anyone has any guides/tutorials/info threads or links that would be a good place to start. HF many years ago seemed to have a lot more readily available information than what I can currently find. Just looking for someone to point me in a good direction. I have a very basic understanding just looking to further my knowledge

Thank you

Corvus Miner is on GitHub.

Money- - August 9, 2026, 9:23 pm

I see you are into mining , if you ever need Windows RDPs you can let me know.

Is just a suggestion. I know I know. But you be surprised the amount of bots ppl get.

The good miners are usually the one hidden in memory.

I have Linux SSHs too.

For rat just get overlord/pure whatever sounds good along with a bulletproof rdp like private alps or find one from kycnot.me, you might also need dns forwarding find one that ignores spamhaus try duckdns maybe

You can find overlord on github btw

And obviously for crypter either make your own or buy a decent crypt from market

Both rats I listed have HVNC and every other feature that you might need usually

Same here, been sitting on the fence for a quite a while here while trying to find a good miner.

I dont mind to pay if the product is solid, but it seems that is hard to determine.

if you guys are still looking for a xmr cpu miner, wait for few more days as I will be releasing my custom coded miner soon.

Its going to be free.
