Thread: [\[NEW\] resetti's Reverse Engineering Services](#)

resetti - August 13, 2026, 4:14 am

Hi and thanks for reading my thread.

I'll keep things simple for the sake of time, I am a malware analyst and reverse engineer, I pretty much do this stuff every single day.

I have experience in reversing anything from Windows PE binaries (C#, Python-pyinstaller, C/C++, Rust/Tauri, Golang, .NET, etc), to Unix based firmware ripped from hardware chips, to Android APK Apps, whether they are packed/obfuscated or not, and more.

I am happy to take an initial look at your binary for absolutely free, then do a 50% upfront, 50% after deal on successful completion of your task, whatever it may be.

(Please do note I usually try and avoid VMProtect or Themida protected binaries as these are a LOT of work, however sometimes binaries will have fake signatures or weak protections outside of the VMProtect/Themida protection, so as I say I'm more than happy to take an initial look)

Contact me in PM if you would like more details or a link to some of my writeups, alternatively, reply to the thread and we can get a contract started.

Have you got any experience in reverse engineering keygens? Either through bypass of the 'license' form itself and or being able to reverse engineer the keygen. Isn't anything crazy complicated.

If so PM me telegram or disc :)

Yes, more than happy to have a look!

What can you do with reverse engineering for apks? I have a game apk (specifically il2cpp) I might be interested in this service if it's possible!

Depends what your goal is! I have reversed many il2cpp games before, feel free to drop me a message.

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley
