Thread: [Zulrah.net - OSRS Merching / Flipping Dashboard](#)

SUI-3183372 - August 16, 2026, 8:15 am

[Zulrah.net](#)

Back in the day, I used to be DEEP in the RS clanning and PVP scene. Getting ddossed on RS back in 2008 is the exact catalyst that led me to discovering HF to begin with. I still have a number of friends who play OSRS, and when I learned they were paying money to merching dashboards that were based on publicly available data, I decided to build out an entirely free dashboard for them.

Some cool functionality: [Grand Exchange Tracking](#) - Your standard tables showing GE data

[GE Optimizer](#) - Give it amount of GP and how many open GE slots you have, and it'll tell you exactly what to buy in what quantity to maximize profits

[Item Pages](#) - Interactive price/volume charts, 1d/7d/30d change, buy/sell pressure gauges, and game updates pinned right on the chart so you can see what caused that spike (I intend on changing our charts, don't like the current look and feel, but functionality is present)

[Market Pulse](#) - Real-time pump/dump/volume-surge detection across every tradeable item. Catch the spike while it's happening

[Active Book](#) - Mark what you actually bought and it babysits the position: live unrealized P&L, alerts when your target hits or the price turns against you (only browser push notifications right now, email and telegram alerts may or may not be added in the future)

[Sector Indices](#) - Stock-market style indices for OSRS: ZUL-20, PvM Gear, Skilling supplies etc

[Daily Gielinor Brief](#) - Auto-generated market recap every day: top movers, detected anomalies, market-relevant game updates and alch arbitrage. Also available as RSS

[Bank Appraiser](#) - Paste a RuneLite bank export and get a real mark-to-market valuation (net of GE tax, patient vs instant sell) instead of a fantasy number. Save snapshots to chart your net worth over time (Potentially broken after a recent update)

[Set & Recipe Profits](#) - Live margins on armour sets, combining items, etc. Spot when the parts are cheaper than the whole

[Flip Score](#) - Every item gets a transparent 0-100 score blending volume, price stability, spread quality and data freshness. The Optimizer refuses to suggest anything scoring under 50

[Smarter Columns](#) - Beyond the basics: Potential (margin x buy limit per 4h cycle), Margin x Volume (liquidity-weighted profit, the single most useful sort), GP/hr, buy/sell pressure, 1h momentum and price-vs-24h-average

[Risk Metrics](#) - Alch floor gap shows your bounded downside (how far an item can fall before high-alching puts a floor under it), and market depth estimates how much GP you can actually move per 4h cycle without tanking the price

[Filters & Presets](#) - Per-column min/max filters, multi-column sorting, and one-click presets like Active Flips, High ROI, Safe Holds and Cheap Flips. Signed-in users can save whole filter/sort setups as named views

I don't play anymore so the default filters may need a bit of work, but my goal was to give you enough in the way of filters and data that you can create your own filter sets and save them (You can either save filters directly on the site, or you can bookmark the page, all filters modify the URL so quick bookmarking can take place).

Goal of the project was to learn more about Svelte while providing a free service to my friends, and whoever else may find this data useful.

I'm open to suggestions, but the project isn't high on my priority list so updates may take some time.

This is cool, I like the domain you snagged. I can see how this could be extremely helpful and I'm all for helping friends out.

I raid rarely with friends but no longer active. I also play Ironman so I don't do any crazy marketing like main accounts do.

Somehow no matter what we stay active in the RS community over the years, even indirectly like this.

Nice work.

CyberXero - August 23, 2026, 7:02 pm

Damn you make me want to play just to flip my coin stack

Could I suggest making a runelite plugin to accompany this ?
