VIBEMONKEY IS LIVE

19 optional Hack Forums tools. One command center.

No Tampermonkey juggling. No Stylus dependency.
Install it once, then activate only the tools you want.

WHAT IS VIBEMONKEY?

VibeMonkey turns our collection of Hack Forums enhancements into one polished, modular Chrome extension.

Every module can be activated or deactivated individually from the on-page command center. All modules start disabled on a fresh installation, so you decide exactly what runs.

One extension. One control center. No stack of separate userscripts to maintain.

CONVO TOOLS

Mention Autocomplete - Type @ and instantly select members from the convo, online list, or your saved names.

Smart Reply Buttons - Quote and reply to individual convo messages faster.

/whois and /lastseen - Pull useful member information directly from a convo.

Username Replacement - Automatically convert @username@ mentions into profile links.

GIF Picker and Reactions - Search GIFs and access reaction controls without leaving HF.

Convo Voice - Join authenticated voice rooms directly from convo pages. The panel can be moved, minimized, or hidden completely. Still in beta.

PERSONALIZATION

Background Switcher - Choose included backgrounds or upload your own.

OSRS Theme - A complete RuneScape-inspired HF appearance without requiring Stylus.

Default Cursor Fix - Restore normal pointer and text cursor behavior.

Convo Redirect - Automatically open the complete convo view.

GROUPS AND ACTIVITY

Popularity Monitor - Track additions, edits, removals, exact points, and your rolling 30-day change.

Quick Popularity - Faster access to member popularity actions.

Group Convo Notifier - Monitor your group conversations for new messages.

Display Group Cycler - Quickly switch between your available display groups.

Groups Navigation - Adds direct group access where it belongs.

UTILITY AND SAFETY

VirusTotal Link Scanner - Scan external post links and open their detailed VirusTotal results.

Movie Review Autofill - Build properly formatted movie review threads with trailer and IMDb information.

Hack Forums Hard Block - Additional control over unwanted member content. Still in beta.

BUILT FOR CHOICE

VibeMonkey does not force every feature on you.

Open the command center, choose your modules, and build the version of HF that works for you. Your selections remain synchronized, and the extension clearly reports which modules are running on the current page.

Already available through the official Chrome Web Store.

Feedback and bug reports are welcome.

Post your suggestions below. VibeMonkey will continue to evolve around the tools the HF community actually wants to use.

HF Tools is an independent third-party service using the HF API. It is not owned, operated, or endorsed by HackForums.net. Use of Bytes and extension features remains subject to Hack Forums rules.

VibeMonkey v1.4.11 Update Log

New Features

[+] Added Group Mention Inserter

Select an HF group and insert every member into a post using proper tags. Supports pagination, removes duplicates, and never submits the post automatically.

[+] Added Convo Shift-Click Mentions

Hold Shift and click an active member in Convo to insert their complete @username@ tag at your cursor.

[+] Expanded Mention Autocomplete to threads

Type @ in Quick Reply, New Reply, New Thread, or Edit Post to select thread participants and frequently mentioned members. Supports mouse and arrow-key navigation.

Fixes and Improvements

- [*] Updated the Group Mention Inserter for HF's current member-list layout.
- [*] Fixed unrelated sidebar and activity names appearing as thread participants.
- [*] Added stricter profile and UID validation.
- [*] Improved duplicate prevention and dynamically loaded content support.
- [*] Completed additional reliability, responsive-layout, and no-auto-submit testing.

VibeMonkey v1.4.13 Update Log

New Features

[+] Expanded HF /summon with autocomplete
Type /summon and begin entering a username to select from current Convo participants, online members, and locally saved frequent names.

[+] Added complete keyboard and mouse navigation
Use Arrow Up, Arrow Down, Tab, Arrow Right, Enter, or your mouse to select a member.

Fixes and Improvements

- [*] Prevented arrow-key selection from jumping back to the first result.
- [*] Filtered random links, navigation labels, CSS fragments, and other invalid names from suggestions.
- [*] Restricted live suggestions to verified HF profile links from Convo participants and the online-member list.
- [*] The first Enter now completes the selected username without sending anything.
- [*] A second Enter is required to confirm and send the summon.
- [*] Successfully summoned members are remembered for quicker future access.
- [*] Improved autocomplete positioning and containment on smaller screens.

Every module remains optional and can be enabled or disabled individually through the VibeMonkey command center.

+1 from me. I've been using it for a few days since he asked me to test it out. I haven't run into any issues with VibeMonkey and it works great :)

vyactor - August 19, 2026, 8:15 pm

Looks interesting. Will check when I'm home today!

CL1B - August 20, 2026, 10:23 am

Hell yeah! Love to see it man, well done Vibe Group and Charlie Sheen

Is voice chat working right now?

Jahad - August 23, 2026, 2:20 pm

Highly recommend this tool for anyone on HF! It makes tagging and messaging way easier, and it's packed with great features.

Charlie Sheen - August 24, 2026, 12:44 pm

Three new VibeMonkey updates are here:

[+] Group Mention Inserter - Select any HF group and automatically add every member to your post using proper mention tags.

[+] Convo Shift-Click Mentions - Hold Shift and click an active Convo member to instantly insert their @username@.

[+] Thread Mention Autocomplete - Type @ while posting to quickly select thread participants or frequently mentioned members using your mouse or arrow keys.

All three tools remain optional and can be controlled individually through VibeMonkey.

Charlie Sheen - August 30, 2026, 4:52 pm

VibeMonkey v1.4.13 is ready:

[+] /summon Autocomplete - Type /summon and start entering a username to choose from current Convo participants, online members, or frequently used names.

[+] Fast Selection - Navigate with the arrow keys, Tab, or your mouse. The first Enter completes the username, and the second Enter confirms the summon.

[+] Cleaner Results - Improved member detection keeps random links, page labels, and code fragments out of the results.

The module remains optional and can be enabled or disabled individually through the VibeMonkey command center.

CyberXero - September 3, 2026, 4:33 pm

pretty awesome stuff !

It's not something I'm selling. This product is free for all members.

Monero-chan - September 21, 2026, 10:11 pm

Any plans on making a Firefox version?

Laughing Man - September 23, 2026, 12:15 am

I'll look into it and see what I can do. It's been over a decade since I've opened Firefox.
