LOOKING FOR OPEN-MINDED PARTNERS

AI • BUSINESS • OPPORTUNITIES • REVENUE

Looking for Open-Minded Partners for AI & Business Ventures

I'm looking for people who want to work together to brainstorm ideas, explore opportunities, and find ways to make money.

I have a lot of ideas already, especially around AI, technology, automation, and online businesses, but I don't want to restrict the possibilities to those areas.

AI is a huge interest of mine and I think there are countless opportunities there, but my mindset is ultimately pretty simple:

If there's an opportunity to make money, I'm willing to explore it.

OPEN-MINDED APPROACH

I'm fairly open-minded when brainstorming and don't have a traditional "only do things this way" mentality.

Blackhat/gray-area concepts, unconventional strategies, and aggressive approaches can all be discussed and evaluated, with the understanding that we'd ultimately decide what we're actually comfortable pursuing.

BRING YOUR IDEAS

I'm specifically looking for people who bring ideas.

I don't want someone to think they need to be technical before reaching out.

You don't need to code.

You don't need to have a business already.

You don't need to understand AI.

If you have a good idea, I want to hear it.

Even if it's half-formed, we can brainstorm around it.

Even if it sounds strange, we can discuss it.

Even if it doesn't work, it might lead us to something that does.

IDEAS + EXECUTION

At the same time, I want people who are willing to put something behind their ideas.

That might be time, money, resources, technical skills, marketing, research, connections, sales, or simply the willingness to learn and help execute.

Everyone doesn't have to contribute in the same way.

I already have plenty of ideas. What I'm looking for is people who can bring their own ideas, challenge mine, help develop them, and actually put in the work when we find something worth pursuing.

THE GOAL

The goal isn't to pick one idea and hope it works.

It's to constantly brainstorm, explore, test, learn, and capitalize on opportunities.

If something works, we put more into it.

If it doesn't, we learn from it and move on.

If we discover something better along the way, we pursue that instead.

BRAINSTORM -> EXPLORE -> TEST -> EXECUTE -> GENERATE REVENUE

WHO I'M LOOKING FOR

I'm money motivated, highly open to different opportunities, and interested in exploring whatever has a realistic potential to generate revenue.

You don't need to have a specific skill set or background.

What matters is that you're willing to think, contribute, collaborate, and put in the work.

INTERESTED?

If that mindset sounds like yours, I'd like to hear from you.

Tell me about yourself, what you're good at, what you can contribute, and any ideas you've been

thinking about — technical or otherwise.

Let's see what we can build together.
