Looks nice,

I have a few questions though.

1. Since it is web based, does that mean you host it?
2. Could you make a comprehensive list of the software/software types it recovers from?
3. Any plans for other file name extensions on windows like .vbss, .js, .bat, etc?
4. Any couch copy?

Has anyone got a review on the Android side of this project? How's its functionality? Stability?
Handling of ~100 or more clients at a time?

Cheers
