Hello,

I have extract the firmware of a TP LINK MR200 wit a CH341A,
And I was thinking on where to start finding vulnerability,
The Web UI, or maybe some other part of the firmware,

And if people have some firmware reversing document, i would like to have theme

DramaKing - September 3, 2026, 10:29 pm

I would let HexStrike AI go at it. It of course helps to know what you might find. Gemini Notebook and Deep Research can compile plenty of information on router vulnerabilities for you.

DeathPenalty666 - September 3, 2026, 10:37 pm

maybe <https://dash.tartarusai.dev/> ai can help too. with the ai agent to run command on this, guide you, run codei n sandbox to find things etc. If you dont mind, do you mind to share i will check on my side with a skilled friend in this domain if he is up to share some of his secret tools with you

UNST0P4B1E - September 4, 2026, 1:08 am

Yea sure I gonna make a dc and share firmware i extracted and if we can team share some tool it be Nice for work
