Thread: [GET CS2 SKins UP TO 60% MARKET](#)

!Gambit! - September 9, 2026, 11:57 am

Hey, I'm building SkinRadar — a CS2 skin-trading tool for people who actively buy and flip skins across marketplaces.

It finds live opportunities and shows the full route before you buy:

- Exact item matching: item name, StatTrak and wear
- Buy price, estimated Steam Wallet outcome, fees, net gain and ROI
- 24h volume, trade-lock context and a quality score
- Direct links to the matching marketplace listing and Steam Market page
- Fresh signals are rechecked regularly, so sold or weaker listings can be replaced
- No Steam login or Steam-account connection required

The main focus right now is helping traders find discounted skins with a realistic Steam Wallet exit calculation — not misleading “fake ROI” based on the wrong wear or generic item price.

It's still early, and I'm actively improving filters, market coverage, matching accuracy, liquidity checks and alerts. I've used the workflow myself and now want more active traders to test it properly.

New users get a 2-day free trial. You can see the live feed and decide if it is useful for your own trading before paying anything.

[Deleted]

I'm looking for people who buy skins regularly and can give honest feedback on:

- Which marketplaces you use
- Which filters matter most
- What would make signals more useful for real trades
- Any inaccurate matches or missing features you notice
