Thread: [Extract, verify, sort & send your own lists | Free 100K/mo](#)

emailmanagerpro - September 17, 2026, 3:38 am

Build your own email lists instead of paying per lookup.

Point the Extractor at the domains and keywords that match your market. It crawls them and pulls the addresses off, spread across your agents. Verify, sort and send from the same platform - one pipeline, and the list is yours the moment it is found.

What you can do with itFind the addresses - Extractor crawls the domains and keywords you choose and collects addresses across your agents.

Know they are real - Email Verifier confirms an address exists before you spend a send on it.

Clean it automatically - Email Processor fixes typos (gmial -> gmail) and bad TLDs, flags junk and classifies into groups. Nothing to run.

Target by infrastructure - Sorter buckets domains by mail provider (MX) and by the mail software each one runs, so you can tailor the send per provider.

Send it yourself - Mailer runs campaigns through your own SMTP servers, with per-message delivery logs.

Stand up a sender fast - SMTP Creator turns a fresh server into a ready-to-send mail server. Paid plans.

Your infrastructure, your reputation

The control center is hosted by us. The agents are a single binary you run on your own machines, sending through your own SMTP servers on your own IPs - so the sending reputation and the data stay with you.

Flat pricing. No credits, no per-email fee, no rationing which prospects are worth a lookup.Free - 1 agent, 100,000 emails owned. Does not expire.

\$49 - 3 agents, 1,000,000 emails owned

\$99 - 10 agents, 10,000,000 emails owned

\$199 - 50 agents, 100,000,000 emails owned

Enterprise - custom. Agent count, team size and support are built around what you actually need, so the price is quoted, not listed.

Try it on a real niche first

Free plan: 100,000 emails a month, one agent, no card, no trial timer. Point it at a market you actually sell into and see what it pulls back. Post your results in this thread - I answer here.
