Thread: [Python Obfuscator & Code Virtualizer](#)

PELock - September 18, 2026, 12:51 pm

Obfuscate, virtualize & protect Python scripts with advanced obfuscations, code virtualization, finite-state automata transformations, self-integrity checks, anti-debugging, anti-sandbox, anti-emulators, anti-vm and many other methods.

50+ obfuscation methods!

Online interface

<https://www.pelock.com/python-obfuscator/>

Windows & Linux UI/CLI clients

<https://www.pelock.com/products/python-obfuscator/download>

SDKs for more automation

<https://www.pelock.com/products/python-obfuscator/api>

Sample obfuscated Python code

VS Code extension (compatible with other IDEs like Cursor)

Use Python Obfuscator directly in your fav IDE

<https://marketplace.visualstudio.com/items?itemName=PELock.python-obfuscator-virtualizer>

<https://open-vsx.org/extension/PELock/python-obfuscator-virtualizer>

Decorator library to control obfuscation in your Python source code

<https://pypi.org/project/python-obfuscator-decorator/>

Hey Does that uses an activation code ?

PELock - September 20, 2026, 1:28 pm

Without the code, the Python Obfuscator works in demo mode; after you activate it, all of the obfuscation options are enabled, and script size limitations are gone.
