Thread: [HRDP/Stealer/HVNC all FUD and Private!](#)

narutohokage737 - September 20, 2026, 9:57 am

Greetings!

The following are available for purchase or on a revenue-share basis:

HVNC

HRDP

Stealer

All tools are private and were written by me from scratch. HRDP works on all versions of Windows and uses a custom crypter.

HVNC is NOT a RAT! I do not have bots for sale or for processing.

If interested, please send me a private message.

This is entirely my own product, and I use my own crypter. It is based on syscalls and in-memory execution.

I didn't send it into battle without its crypter—why give away my signature? I'm sure it'll just be a standard wacatak or bearfoos.

loadman - September 20, 2026, 10:13 am

ur stealer works with dbsc?

narutohokage737 - September 20, 2026, 10:20 am

(Sep 20, 2026 10:13 AM)loadman Wrote: [\[CITE\]](#) ur stealer works with dbsc?

Honestly, no. That's what HRDP is for; I developed my own custom method. I wrote a patch for Chromium-based browsers and set it up so you can launch them using a copy of the victim's folder. It solves all the issues.

What does another computer have to do with it? It's HRDP—you're on the victim's machine. How are you supposed to reproduce everything when there's an app bound? Buddy, I think you misunderstood me.

I was thinking about reproducing the session on another machine when you were talking about operating directly on the victim's machine through HRDP. That was my blunder. would love to test ur malware in my free time

You did state "using a copy of the victim's folder."

narutohokage737 - September 20, 2026, 11:53 am

(Sep 20, 2026 11:48 AM)DramaKing Wrote: [\[CITE\]](#) You did state "using a copy of the victim's folder." But how do you launch a copy of the victim's browser via HRDP without a copy of their folder? Maybe my English is bad, but if you're deep into this game, you should understand what I mean.

Then it's actually HVNC.

My friend, that means you have absolutely no idea what you're talking about.

(Sep 20, 2026 02:45 PM)VexoSupply Wrote: [\[CITE\]](#) Good luck with sales, hope you find buyers fast. Thanks!! Very much!

Well, one of us does, and I've never heard of browser-based HRDP. That's always called HVNC. HRDP uses a hidden desktop session.

Maybe you come from a community that swaps terms around but for everyone else....

If there is such a web based HRDP it would be really useful. Something I would use daily.

Well GLWS. I don't want to trash infact I do webbased RDP via proxmox VNC > RDP.

Oh... I was talking about how the victim's browser runs within the HRDP session as if it were the user's own. I have my own patches and my own approach. I haven't seen any other HRDP setup capable of launching the browser with all the victim's data intact—without decryption or specific import procedures. Plus, my HRDP solution works on Home editions, whereas many—if not all—other HRDP tools don't support that. HVNC It's a hidden desktop—basically buggy for the most part. In my opinion, working with the victim via HRDP is much more convenient.

DramaKing - September 21, 2026, 2:58 am

We can agree on the buggy part. If it's that good, I may know someone who can use this.

Don't worry, friends. I'll certainly show you a demo and we'll run some tests. The main thing is that the working terms suit us both.
