Thread: [Prime QR USDT Drainer](#)

flashcrypto2026 - September 21, 2026, 11:51 am

The Prime QR Drainer is offered for a few different networks.

Escrow Accepted

Your current network options include:

ERC-20 (ETHEREUM)

BEP-20 (BNB sMART CHAIN)

TRC-20 (TRON)

Each of the options above are also available in two different variants.

Basic ?

Upgraded ?

Basic ?

The Basic version simply drains right away with zero delay as soon as the prompt is signed. The included Telegram bot is only informational, you do not interact with it. Bot notifications include:

New visitor detected

Wallet connected

Balance check

Approval successful

Drain successful

Drain amounts

Basic price: \$600USD

??????????

Upgraded ?

The Upgraded version includes everything in Basic, except it delays the drain and lets you monitor the wallet so you can drain when the time is right. With this option, your Telegram bot is used similar to a C2 (command & control). You have a couple extra functions in your bot, [check_balance] and [drain] also the fake send page actually works like a real one, and it only takes the amount the user enters. So from their perspective everything behaves as it should, but what they can't see is the new token approval that was just signed with their wallet. It only collects the amount they enter initially, but then it sits on the approval indefinitely, just waiting for the C2 to call the collect function.

As users click through the workflow of your page, you will start to stack wallet approvals in your Telegram bot listed just the same as any other message thread, but each one will include the set of buttons. At any time you can pick and choose which wallets to drain using the buttons, or you can use the /drainall command to consecutively trigger collect on every approval you have.

These approvals never expire, and are valid indefinitely, unless the users revoke them, which most casual crypto users don't know how to do.

Upgraded price: +\$300USD

Both versions get future updates, as well as the updated send page, and both get you invited to the private group chat exclusively for owners of the Prime QR Drainer. The private group chat is the best place to:

- Receive updates & security patches
- Stay informed about coming updates
- Request certain features in future updates
- Ask questions & resolve issues
- Access databases that are not shared publicly
- Exchange knowledge & experience with other users
- Get early access & beta test new unreleased tools

Setup

When you purchase the product, the package you receive includes a comprehensive setup guide. DEPLOY.pdf contains detailed, step-by-step instructions for getting your drainer up and running on a brand new VPS , including every command you need to run in the correct sequence.

??That's a fancy way of saying: Anybody should be able to pick up this guide and if they can read English, they can deploy fully functional wallet drainer. Without any outside help.

that being said, if there are any steps you don't understand, or a command is not behaving as expected, just contact support and we will help you with any of the steps for no extra charge, but if you don't want to do it at all or cant be bothered for whatever reason, we can do the entire setup/install for you for a \$150 fee. You should know that if you do elect to have us do your setup, there are still a couple parts you will need to do yourself for security purposes. For example:

You want to be the one to create your Telegram bot so you are the only one who has the bot token which ultimately controls the bot...

You are going to want to deploy the smart contract from your own wallet so you own the smart contract...

they are very easy little steps, but very important for operational security on your part!? loading encrypted image... [contract=tid]Start Contract[/contract]

Stanley - September 26, 2026, 1:43 pm

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley
