Thread: [Uncensored LLM / SE Bot - Geo-Targeted \(RO/EU\)](#)

stefan77 - September 23, 2026, 2:18 am

Hey guys,

Looking to buy access to an uncensored AI model (API or Telegram bot) optimized for Social Engineering (SE) and mass mailing.

Need to generate highly persuasive, native-sounding text in Romanian (RO). Needs to handle local dialects and context without triggering safety filters (no "I cannot fulfill this request" BS).

Features needed:

100% filter bypass for financial/crypto SE scenarios.

Good context window.

Native RO language output (not just cheap Google Translate).

Let me know your pricing (Monthly/Lifetime). Escrow is a must. Drop your Telegram/Tox handle below or PM me.

I'm interested in this too! Following this thread for updates

tomcafiar - September 23, 2026, 9:39 am

The best approach is to visit Hugging Face, download AI models, and modify them locally to remove cloud-based restrictions or filters—provided you have the necessary programming skills.

Alternatively, if you would prefer to use my own AI software—which has had restrictions removed and operates via an API connection to another AI—the cost is \$85 per month for unlimited usage.

how much data do you have when it comes to the desired end results? look for <abliterated> versions online of the self-hostable models, you surely can use those. because i dont think many people already have done this for your specific use case, those that did, already uses it for themselves so going thru escrow nd stuff for a project without a true end is not very attractive .

i would say best bet is making it yourself which is 100% doable on your own nowadays with ai.

if you want to connect, lmk ur discord or telegram. we can keep in touch and i can let u know my input when u need help
