Thread: [How to cryptojacking](#)

theozoulette - September 23, 2026, 12:24 pm

Hello, I'm new to the world of hacking, and I'd like to create a program that's extremely discreet and undetectable to mine cryptocurrency. Can you recommend your best tools Thank you

Respect - September 23, 2026, 12:26 pm

Theres enough of these programs available for free or low cost, you wouldn't need to go through the trouble of creating your own. The hard part is getting enough systems running your program for you to make anything via mining.

You'll almost certainly spend more on crypting than you will earn in Monero, even at today's levels.
