Thread: [RedLotus Dotnet Crypts | RUNTIME/SCANTIME FUD | .NET4 SUPPORTED | Big5++ BYPASS](#)

Infinity. - September 24, 2026, 9:52 am

Hi HF

Original sales thread: <https://hackforums.net/showthread.php?tid=4497231>

Previous Sales thread: <https://hackforums.net/showthread.php?tid=6289485>

My previous Native x64 crypter messed things up for dotnet and wasn't getting any client since a lot of them were not using x64 RATs. There are huge discounts for the previous sales thread customers

REDLOTUS STUDIO

Windows .NET Application (dotnet 4-10) Crypter Suite

Native loader • Authenticated application packaging • IL transforms • x86 and x64

SUPPORTED INPUTS

Pure-managed .NET Framework 4.x console applications

Pure-managed .NET Framework 4.x Windows GUI applications

Pure-managed .NET Framework DLL assemblies

x86, x64, and AnyCPU targets

.NET Core and .NET 5+ Windows app-host executables through application bundle mode

Mixed native and managed Windows executables through application bundle mode

Framework-dependent and self-contained published application directories

For .NET Core, .NET 5+, and mixed applications, select the executable from an isolated publish or deployment directory. RedLotus packages the application directory because configuration files,

native dependencies, content, and framework files may be required at runtime.

CRYPTER PIPELINE

Authenticated native packageAES-256-GCM authenticated encryption for packaged application data

Fresh 256-bit build material for every protected output

Random salt, nonce, and build identifier generation

HKDF-HMAC-SHA256 key derivation

SHA-256 plaintext metadata validation

Atomic output creation to avoid incomplete builds

Native Windows loaderRust-based x86 and x64 loader templates

Separate console and Windows GUI subsystem templates

Original command-line arguments are preserved

Pure .NET Framework applications are loaded through CLR v4 hosting

Whole-application bundles run from an isolated, randomly named temporary directory

Temporary runtime files are removed after execution

Managed protection optionsString constant transformation with runtime restoration

String preview and per-string exclusions

Method-body serialization with deferred runtime materialization

Private type, method, and field name obfuscation

Control-flow flattening for compatible methods

Junk IL injection

IL integrity metadata with runtime verification on the deferred method-body path

Per-build watermark GUID and optional customer identifier

Detailed build manifest and activity log

Compatibility-aware workflowAutomatic framework, architecture, subsystem, and assembly-type detection

IL-only controls are disabled automatically when application bundle mode is required

Advanced transforms start disabled and can be enabled independently

Console applications keep visible console output

Windows GUI applications keep their GUI subsystem behavior

LICENSING AND DELIVERY Or we can deal on HF/Telegram/Signal/Session

Contact Me:

Telegram: @defimirai

HF: Contract

Download and open the locked RedLotus Studio client.

Copy the displayed Machine ID or select Buy License.

Choose a license plan and complete payment through NOWPayments.

After the signed payment callback is confirmed, download the generated license file.

Select Activate License. The protection workspace opens after local signature and machine-binding validation.

Licenses use RSA-PSS signatures and are bound to the purchasing machine. The application contains only the public verification key. The private signing key remains on the fulfillment server. Checkout does not trust browser redirects as payment proof; fulfillment requires a valid signed NOWPayments notification with matching order, invoice, currency, amount, and payment identity.

Payment processor: NOWPayments

Checkout: Open the Buy License button inside RedLotus Studio

Client download: Request the locked customer client through this thread or private message

PRICING

1 month\$259 USDUnlimited Crypts/FUDs

6 months\$950 USDUnlimited Crypts

12 months\$1525 USDUnlimited crypts/FUDs

All plans include the same protection features. The selected term controls license duration only.

Update cadence: Two scheduled product updates each month during the active license term. Updates may contain compatibility work, protection improvements, interface changes, and maintenance fixes.

CUSTOMER PACKAGE

The customer ZIP is self-contained and contains the compiled Studio executable plus required runtime components. Customers do not need Rust, Python, Visual Studio, project source, a master-key file, or vendor-side license tools.

Recommended environmentWindows 10 or Windows 11

64-bit operating system for Studio

.NET Framework 4.8 installed when running protected Framework applications

The target .NET runtime installed for framework-dependent application bundles

FAQ

Does it support .NET 5, 6, 7, 8, and later applications?

Yes, through whole-application bundle mode. Select the Windows app-host executable from the publish directory.

Is it FUD?

Yes, you receive monthly 2 FUD(s)

Does it support DLL files?

Pure-managed .NET Framework DLL inputs are supported. Keep the protected DLL under the filename expected by the consuming application.

Does it support x86 applications?

Yes. The release includes native x86 and x64 console and GUI loader templates.

Do customers receive source code?

No. Customers receive the compiled Studio package and runtime components only.

Are builds limited?

No. Builds are unlimited while the license is active.

Can I use the same license on several computers?

Licenses are machine-bound. Activate the license on the machine whose ID was supplied during checkout.

Does RedLotus guarantee that every advanced transform will work with every application?
Yes. The GUI separates core protections from advanced transforms so they can be tested independently.

Can RedLotus guarantee that protected software is impossible to reverse engineer?
No legitimate client-side protection product can make that guarantee. RedLotus combines authenticated packaging, a native loader, managed transforms, integrity metadata, and watermarking to increase the work required.

Stanley - October 6, 2026, 9:05 am

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley
