Thread: [I'm accepting applications from specialists who deliver and communicate](#)

Mxstermind - September 30, 2026, 2:17 pm

I'm growing the BrandForge specialist network and looking for people with real ability in development, design, editing, and marketing. I care about shipped work, clear estimates, honest limits, and reliable handoffs more than big claims.

When applying, show links to work you personally contributed to and explain your role. Tell me which projects you want and what you can actually take on. I don't want fake portfolio items or invented vouches.

If that matches how you work, read the developer page and apply. I review submissions myself.

I put the relevant page here: <https://brandforge.gg/apply>

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley

Have you had any luck here finding people with real ability in development, design, editing, writing and marketing from Hack Forums?

CL1B - October 19, 2026, 6:21 am

To be honest, the current portfolio of BF makes it high probability that it's not going anywhere. Why? The portfolio is full of sites like Drain and White Sky Hosting which are poorly designed, a lot of layout structure is not consistent and too many variables in margins and other basic web dev fundamentals. That + them giving the impression they are almost fully vibecoded will scare any real web dev away.

Before trying to employ you need to put yourself in the shoes of a possible employee and invest/research what their options are, you will quickly learn that no real skilled/educated webdev is going to go for something so below the threshold.

Lack of education is a danger to your ability to understand these things (intellect) so if you're young and have plenty of time: Go to school for this! You clearly want part in this economy, so go for it! I think you will learn so much.
