Thread: [Breaking Claude's Watermark](#)

The Pact - October 3, 2026, 4:53 am

A tool to do this is already extremely popular with no proof that it actually works.

I have never used Claude.

I did write something that came out written like a play or film which I was asking AI to reformat more like a novel.

But now I'm a bit worried about giving it my personal work and about whether other AI might have watermarks.

Also if you have the skill to break this stuff there is money out there for you.

Looking at the press release, it's just word pattern detection.

from a cyber perspective im pretty sure they can check any generated code posted online and from there check which of their customer generated it and what was the project about to be honest. im more worried about this for my use case
