Thread: [RATs with proxy support](#)

big_man_blastoise - October 6, 2026, 2:22 am

Anyone know of a RAT with SOCKS5 support built-in.

Currently I use Async.

thought about adding SOCKS5 support to my clone of the repo but managing rotating residential IPs for the deployed agents is a headache.

are there any that can do this already?

doesnt have to be free

Overlord RAT will be a clear upgrade for you. However, it binds to localhost and not 0.0.0.0 like it says.

Thanks man. notice a few things on overlord recently, just in passing.

Looks pretty good so i guess it's worth spending the time to get to know it.

probably would be time better spent than adding socks5 support to Async just for it to still go 70/70 on av detection lol

If you need more reasons, this is with built-in obfuscation and encoding and my own anti-sandbox method.
