Thread: [PHP MyCode CSS](#)

Omniscient - *October 7, 2026, 8:50 am*

I am updating HF's php.ini for better css on the PHP MyCode.

PHP Code

```
<?php
```

```
// Single-line comment
```

```
# Alternate comment style
```

```
/*
```

```
 * Multi-line comment
```

```
 * Testing PHP syntax highlighting
```

```
*/
```

```
$site_name = "HackForums.net";
```

```
$version = 'PHP 8.3';
```

```
$enabled = true;
```

```
$disabled = false;
```

```
$count = 42;
```

```
$price = 19.95;
```

```
$nothing = null;
```

```
$settings = [
```

```
    'theme' => 'dark',
```

```
    'language' => 'English',
```

```
    'php_version' => '8.3',
```

```
    'enabled' => true
```

```
];
```

```
function format_username($username, $uid = 0)
```

```
{
```

```
    if(empty($username))
```

```
    {
```

```
        return 'Guest';
```

```
    }
```

```
    return "<strong>{$username}</strong> (UID: {$uid})";
```

```
}
```

```
class HFExample
```

```
{
```

```
    public string $name = 'HackForums';
```

```
    private int $count = 0;
```

```
    public function increment(): int
```

```

    {
        $this->count++;

        return $this->count;
    }
}

$user = [
    'uid' => 1,
    'username' => 'Omniscient',
    'usergroup' => 4
];

if($enabled && $user['uid'] > 0)
{
    echo "Welcome, " . $user['username'] . "!<br>";
}
elseif($disabled)
{
    echo 'Feature disabled.';
}
else
{
    echo 'Unknown status.';
}

foreach($settings as $key => $value)
{
    echo $key . ' = ' . var_export($value, true) . "<br>";
}

for($i = 0; $i < 5; $i++)
{
    echo "Loop number: {$i}<br>";
}

switch($user['usergroup'])
{
    case 4:
        $group = 'Administrator';
        break;

    case 3:
        $group = 'Super Moderator';
        break;

    default:
        $group = 'Member';
        break;
}

try
{

```

```

        if($count > 100)
        {
            throw new Exception('Count is too high.');
```

```

        }
    }
    catch(Exception $e)
    {
        error_log($e->getMessage());
    }
}

$sql = "
    SELECT uid, username, email
    FROM mybb_users
    WHERE uid = '{$user['uid']}'
    LIMIT 1
";

$result = $db->query($sql);

echo format_username(
    $user['username'],
    $user['uid']
);

?>
<div class="example">
    <strong>HTML inside PHP MyCode</strong>
    <a href="https://hackforums.net/">HackForums.net</a>
</div>
```

Wish I knew a damn thing about PHP.

Can someone translate? On mobile or id ask GPT

It just goes through examples of different types of variables, loops, and functions.
