Relaunch of the temporary community convo, now running on HF API v2!

Now live at: <https://quantumhf.uk/convo/>

- Simply sign in trough HackForums and enjoy the original look and feel of HF Convo now with:
- Improved Public convo, Private convo and HF groups convos!
- Emoji reactions to chat messages
- Emoji & GIF picker
- Improved mobile UX
- Improved Online/AFK system (AFK no longer receives rain!)
- Full theme customizability and community theme browser
- Voice memos
- Increased media upload size (up to 20 MB)
- Improved social media and website embeds
- Improved UX (Mute members, censor bad words, translate messages and more!)

I hope this is a nice stay for our community during this server migration, please keep in mind that this runs on a very small pod (1gb of ram); I'm not behind the desk a lot but if the server gets overwhelmed let me know and I'll scale it up.

Same goes for bugs.

Enjoy.

Members please note this is not official HF Convo. This is a project by @op@ only. Official HF Convo will be back in a week or two. Sooner if i can.

**Scrub** - October 8, 2026, 8:26 am

Nice lil project

**CL1B** - October 8, 2026, 10:22 am

Woop woop!

**HerrWinston** - October 8, 2026, 10:38 am

i like it, would love to see a few more users and a bit promotion on the site, shows what users can build with the api and furthermore shows that the users still deeply care about the forum.

**DemonAsylum** - October 8, 2026, 11:38 am

Thanks for taking the time to put this together. Omni already has Chatwee set up of course, but it doesn't hurt to have an alternative. It's just nice having anything while we wait for the official convo return.

Glad to hear it should return soon. Looking forward to it.

I think it's a wasted effort. Seems more like an attempt to prove something. Will be useless once HF Convo returns. @op@ is intentionally pushing my buttons with this nonsense.

To be honest the old version looks better than that.

@op@ not working, is this because of the update or ops weak ass name.

Because I have the notify hook commented out and that processed the mention tags. I'll fix shortly. I've been working on dozens of things this morning.

Love the mobile indicators

Yall don't miss flipping?

? loading encrypted image...

Truly this convo is better than the OG, especially UX. It's extremely sad to see it not get adopted, same thing with Convo App from earlier this year.

Makes you wonder what's in the way of greatness for HF.

Fake flipping lame.

It's a bootleg convo, tf did you expect?

Every member that comes in tells us this is better than OG within their first 5 minutes, the flip stuff is irrelevant to having OG convo look and feel around.

Get the point or shush.

The ui doesn't really look that much better than old convo.

That would never be the case, it's supposed to be OG convo with added features and group chats working (broken since Nodes found the DB overflow bug in Load more messages pipeline)

If you miss old convo, community convo is where it's at until native is back. So far, all the active convo members who popped in absolutely love community convo! Love 2 see it finally get trough.

Made 2 themes, did you know you can create and share custom themes in the community tab?  
Looking forward to others because I suck at color schemes/pallets

? loading encrypted image... Heads up;

Implemented provably fair for /flip and moved to a 2 gb memory pod just now.

Whole thing looks weird tbh.

**Eran** - October 12, 2026, 6:14 am

Looks good, not the real thing but still great job! Does it have flipping?

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,  
Stanley
