Looking for uncensored AI models!

Hi everyone, do you know of any uncensored AI models that can run locally within the Cursor environment? (Similar to how Claude can be used via the "Claude Code for VS Code" extension in Cursor.)

Thanks!

I have my own proprietary, uncensored AI software. I can code anything or build anything for you, and I can offer it to you for a monthly subscription of \$110 with unlimited usage. There is also a special yearly subscription offer available.

? loading encrypted image...b

Look, bro

Look, bro

Would need some testing to prove it's worth, How good is it at specific tasks etc,

What model does it run on? Interested myself.

There are countless Abliterated frontier models like GLM 5.2 or such on HuggingFace, they just cost 2x B200s to run locally or rent. which is expensive

I personally just use Abliterated API's on pay as you go, annoying, but its frontier big models like

GLM 5.3 so its not retarded:

Some options:

<https://refuseless.com/>

<https://blackbit.sh/>

<https://adverserial.ai/>

<https://abliteration.ai/>
