Thread: [Hash Calculator App for Android, 49+ algorithms](#)

PELock - *October 9, 2026, 6:38 am*

Hash Calculator computes dozens of checksums and message digests on your phone. Hash typed text, hex bytes, or a file, then copy any result in one tap.

Three input modes • Text — UTF-8, optional Windows (CRLF) line endings
Hex — digits 0–9 and A–F, including a 0x prefix (for example 0xDEADBEEF)
File — pick any file up to 32 MB

Press HASH to calculate every supported algorithm at once. Search the list, pin favorites with a heart (they stay at the top next time), and copy one digest or all of them. A hex dump of the input is always shown at the end.

Algorithms (49) • Common: MD5, SHA-1, SHA-256, SHA-512, CRC32
SHA-2: SHA-224, SHA-384, SHA-512/224, SHA-512/256
SHA-3: SHA3-224, SHA3-256, SHA3-384, SHA3-512
RIPEMD: 128, 160, 256, 320
Tiger: 128, 160, 192
HAVAL: 128–256 bits, 3–5 passes
Checksums: CRC32 (BZIP), CRC32C, Adler32, FNV-1 / FNV-1a (32/64), JOAAT
Other: MD2, MD4, Whirlpool, GOST, GOST CryptoPro, Snefru

Hashing runs on the device. Your text and files are not uploaded to calculate a digest.
